IntelliView™

"The Most Comprehensive Fire & EMS Asset and Inventory Management System"

Logistics, Stations, other Fixed Locations:

- Easy check out and check in
- *IntelliShelf™* Technology
- Track Inventory, Assets, Service
- Track drugs, temperatures, readiness
- Cloud based easy access

Vehicles

- IntelliVan™ Technology
- Tracks Medications
- Monitors temperature
- Auto detects missing equipment
- Android Smart Phone Interface

"The City of Fort Lauderdale Fire-Rescue Department is constantly striving to advance in updated equipment and technologies to enhance daily operations and overall accountability with all Department (City) assets. Through the use of RFID technology the Department will enhance Fire Logistics operations in regards to all supplies and equipment utilized. Fire Operations will utilize the technology to enhance ordering, restock and inventory checks. This new technology is accurate and reduces time frames drastically compared to actual physical counts that had to be conducted on a routine basis" .

Battalion Chief Cris Dietz
Fort Lauderdale Fire Rescue

SILENT PARTNER TECHNOLOGIES

Real-Time Firehouse Equipment & Inventory Tracking System

There are three main reasons to consider the SPT *IntelliView™* RFID Equipment and Inventory Management System: First, it is the *most complete* system designed specifically for Fire and EMS organizations to track and locate your valuable equipment and supplies. Second, it will ensure you *maximize the use of your assets*-- with no equipment ever left behind. And third, it takes inventory tracking to a higher level by incorporating *IntelliShelf™* and RFID based technologies.

1) *IntelliView™* was specifically designed for use at Fire Stations and *EMS organizations.*

This solution was modeled around the daily operations of the typical Fire and EMS station. We are not adapting another industry product to work in your station. The system addresses your every day needs with respect to inventory management and equipment tracking, including inspections and shift checklist signoffs—with electronic audit trail.

2) The *most comprehensive* system to track inventory, assets, service, readiness, temperature, narcotics, and more—with complete "audit trail" of every "transaction".

IntelliView™ is the *most comprehensive* system to track and manage all your inventory and assets—while using the latest technologies. SPT's RFID technology allows you to inventory an entire supply cabinet in seconds. We use a combination of **IntelliShelf™** technology as well as a mobile RFID reader to quickly scan all your assets, equipment, and consumable supplies. Our system can also include the tracking and scheduling of maintenance operations or inspections. The solution is cloud based which means you can access it from any browser including an IPAD or Tablet device—no need to involve IT departments or deploy costly servers and PCs.

3) The *most comprehensive* system to track inventory and assets in your vehicles.

IntelliVan™ **Mobile** is the *most comprehensive* system to track and find your equipment in your vehicles. For equipment and supplies in the vehicles, using your smart phone, the system automatically confirms that all your assets are on board and accounted for before the vehicle departs for a scene, or returning from the scene. Turn on your smart phone and see the location of all your assets in seconds, find your equipment right down to the vehicle, bin or cabinet-if it is not in your vehicle, you will know.

We also provide the ability to track the temperature in patient compartment, as well as the refrigerated medications—as well as expiration dates on all meds. The system will notify you when the temperature approaches a dangerous level, thus saving the cost of replacing valuable medications or even using medications that have or are potentially expired.

In addition, *IntelliView™* has fully integrated modules for passive and active RFID technology, calibration, kitting, inventory, service, report writer, alerts engine, mapping, and much more. It is highly scalable and fully customizable, and leverages all the latest state-of-the-art technologies such as wireless mobility, *IntelliShelf™* technology, and RFID.

There is *nothing* on the market that is more comprehensive than Silent Partner Technologies' *IntelliView™* System.
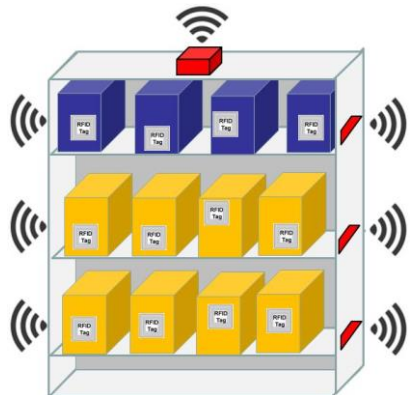

Auto-Detect Assets in the Vehicle

Auto-Detect features:

1. Automatically scan for assets that are expected to be in your vehicle
2. Color coded easy to read application runs on any smart phone with an android operating system.
3. Reads the entire vehicle inventory in seconds

IntelliShelf™ Technology

Visibility to vehicle inventories and dashboard data
