HOSPITALS

A PROACTIVE EMERGENCY RESPONSE SYSTEM

Hospitals and Medical Centers are locations where the sick, injured, and otherwise unwell expect to be able to receive treatment in safe and secure environments.

Hospital administrators are expected to plan for and prevent the spread of illnesses and diseases within their facilities, and likewise, Hospital security staff are expected to prevent and mitigate dangerous situations including intruders, hostage situations, and to plan for major community disasters and prevent the crisis from escalating within their facilities. Medical facilities of all sizes need a system that integrates, educates, and empowers their staff and visitors, first responders and the community to effectively address emergency situations and ensure safety.

BeSafe delivers accurate and detailed information including floor plans, building demographics and any unique features found on site, and places this information directly in the hands of police, fire, SWAT and other emergency teams. In the event of an emergency, information is instantly accessible so critical decisions can be made quickly and effectively.

ABOUT BESAFE

BeSafe Technologies, Inc. delivers **BeSafe®**, a **proactive emergency response system** serving K-12, Higher Ed, Corporate, Housing and Government. Endorsed by police, fire, EMT, SWAT and other emergency response personnel, BeSafe enables first responders to make critical, life-saving decisions with immediate access to crucial information about any facility. THE BESAFE SAFETY PORTAL

- SECURE DOCUMENT MANAGEMENT AND PUBLICATION
- EMERGENCY CONTACT INFORMATION
- CONTENT MANAGEMENT
- BESAFE INFORMATION FOR FIRST RESPONDERS
- CONSISTENT INFORMATION FOR ALL USERS
- USER AND GROUP MANAGEMENT

BENEFITS

STATE AND LOCAL GOVERNMENT AGENCIES:

BeSafe enables multiple municipal and state agencies to provide coordinated responses to emergencies on campus. All first responders are looking at the same data and can effectively communicate and work together.

FACILITIES MANAGEMENT:

BeSafe enables facility managers to efficiently distribute accurate, up-to-date building information to all first responders that is essential to protecting citizens.

FIRE:

BeSafe gives the fire personnel access to critical information, even before they arrive onsite, such as number of occupants, locations of hazardous materials, utility shutoffs, emergency contact data and alternate approaches if primary routes are blocked.

POLICE:

BeSafe gives police an on-demand detailed understanding of buildings they may not be familiar with. Having instant access to a school's floorplan and digital photos, officers can quickly determine the safest routes to any area of the building.

EMTS:

BeSafe equips EMT's with the information they need to identify the most direct path to accident and emergency locations. Knowledge of windows and roof accesses improve EMT's ability to respond to changing conditions in an emergency.
