### **Study of Leadership and Strategic Intention to use Cloud Computing by Dr. Alan F. Castillo**

**CHANDLER, AZ – August 20, 2014** – Dr. Alan F. Castillo, President & Senior Consulting Engineer of Cloud Computing Technologies, has recently completed a dissertation study that is now available to purchase exclusively at ProQuest. When asked about the study, Dr. Castillo said “I couldn’t be more excited to finally present the culmination of four long years of doctoral study in the areas of leadership practice and cloud computing for strategic advantage to the academic and business communities. I believe organizations of all types will greatly benefit from the information contained within.”

The purpose of this study was to examine a theoretical model that was built of leadership practice, various attitudes of business process outsourcing, and strategic intentions of leaders for the examination of relationships between each of the aforementioned variables. The study was designed to closely examine and investigate the propensity of leaders to combine business process outsourcing with the inherent benefits of cloud computing for the processes of competitive innovation.

The dissertation “A QUANTITATIVE STUDY OF THE RELATIONSHIP BETWEEN LEADERSHIP PRACTICE AND STRATEGIC INTENTIONS TO USE CLOUD COMPUTING” is available for purchase exclusively at ProQuest at the URL <http://dissexpress.umi.com/dxweb/search.html> with the UMI Publication Number 3583230.
