

Microsol Resources Announces Newest Technology Partnership with Asite

New York, NY, August 12, 2014 – Microsol Resources Corporation, a recognized leader in building information modelling (BIM) technology solutions, as well as a leading Autodesk Platinum Partner serving the architectural, engineering and construction (AEC) industries, is pleased to announce the addition of Asite to its growing association of Technology Partners.

Asite's cloud technology gives everyone involved in construction projects access to key information online; allowing for increased collaboration, fewer mistakes, reduced rework, and time and cost savings. Asite's Adoddle platform allows firms to store and manage all of their project data in one central and secure repository. It also enables customers to fully customize the structure of their content with highly controlled access and rich configurable workflows to allow project controls. The Adoddle platform is used by leading architecture, engineering, construction firms as well as property owners worldwide to manage their largest and most demanding capital investment programs.

"We are thrilled to be able to partner with Asite to provide our customers with a superb product for project information, data management and collaboration", said Emilio Krausz, President of Microsol Resources. "Our customers have been voicing the need for this type software, especially as BIM workflows demands an easier way to collaborate on project portfolios of all sizes. Asite finally addresses all of these needs and more."

"We are excited to welcome Microsol Resources to the Asite partner community," said Tony Ryan, Asite CEO. "Together, we will provide leading digital services to the AECO industry in North America in an effort to simplify the complex challenges they face every day."

This latest partnership reinforces the dedication of Microsol Resources to matching business needs with products and support, one of many reasons that the company has received numerous recent accolades such as Autodesk's Partner of the Year, and exceptional rankings in customer satisfaction.

To start this new partnership, Microsol Resources is hosting a four-week webinar series on "*Introducing Asite for Cloud-Based Project Management and Data Collaboration*" for construction management, transportation and retail projects as well as a webinar on cloud-based building information modeling (BIM) collaboration. The webinar series is scheduled on Tuesdays at 11 am on September 23 and 30 and October 7 and 14. To register for this event, click here: <http://microsolresources.com/events/>

About Microsol Resources

Microsol Resources has been delivering integrated solutions to the architecture, engineering and construction (AEC) industries for 27 years. It is a recognized leader in building information modeling (BIM) technology solutions, as well as an Autodesk Platinum Partner with offices in New York, Boston and Philadelphia, with a professional staff of BIM/CAD Applications Experts focused on supporting the AEC community. From technical support, to BIM implementation, basic and advanced training, standards development, model management services, staffing and 3D printing, our services are designed to address AEC firms' specific needs.
