

MedicScan Solutions for iPatientCare Users

MedicScan® by Card Scanning Solutions – Improve Front Office Efficiency, Reduce Errors and Cut Costs!

iPatientCare has integrated MedicScan OCR technology to streamline the patient registration process by eliminating the need to photocopy/manually enter patient ID cards, and medical insurance cards resulting in greater efficiency, reduced human error, and lower costs. iPatientCare users can capture the images of the cards and display them in iPatientCare for future reference by the practice staff. The information from the cards is automatically extracted and auto-populates the text fields in iPatientCare.

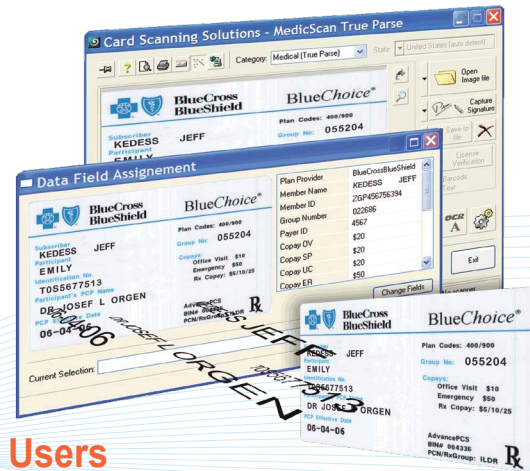

Benefits:

- Prevents costly manual data entry errors (e.g. patient name, date of birth, insurance card number).
- Collect accurate information.
- Limit push back claims.
- Fast processing time, just a few seconds per scan.
- Expedited patient registration.
- Providing a better overall patient experience.

Features:

- Automatic card detection – just insert a card to begin the scanning process.
- Extracts data of driver's licenses and automatically auto-populates patient record.
- Extraction data of medical insurance cards and automatically auto-populates patient record.
- Ability to read driver's licenses and ID cards of all 50 US states, and over 80 countries around the world.

The hardware option is the compact, space-saving USB powered duplex device; The Scanshell 800DX. This device delivers quick digital capture with zero warm up time and no need for an external power supply.
