

VoiceKey.WEBACCESS

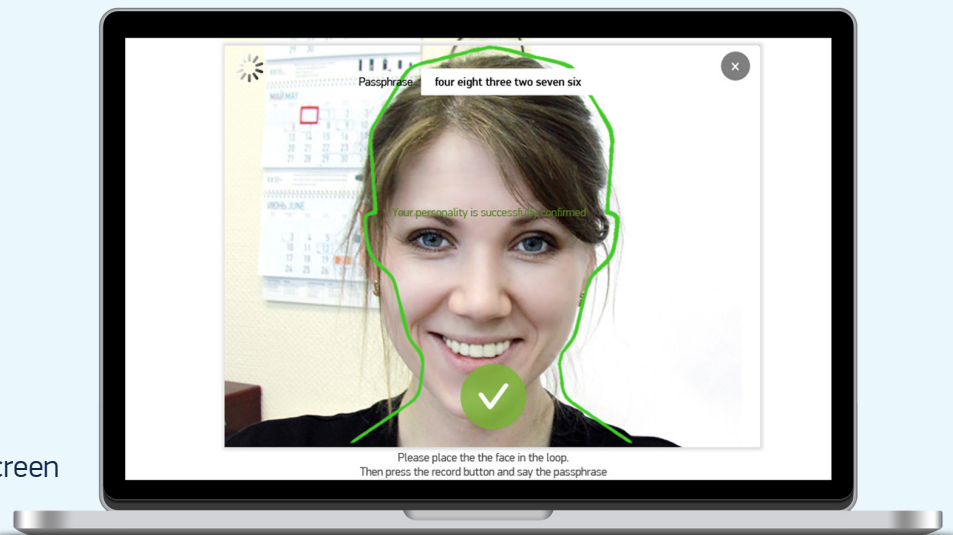

Voice + Face Biometric Authentication Online

Complex passwords and cumbersome dongles are now obsolete. Biometric technology offers a secure and user friendly solution to authenticate online. The combination of voice verification and facial recognition guarantees authentication with a simple interface that utilizes hardware readily available on every smartphone and laptop.

Now you can supplement or replace traditional authentication online with **VoiceKey.WEBACCESS**

Easy Enrollment on your PC, Mobile or Tablet in less than a minute.

- Position your face on the screen using integrated camera
- Click on Icon when in position
- Read random numbers prompted on screen

VoiceKey.WEBACCESS offers unparalleled biometric security solution:

- **VoiceKey.WEBACCESS** Triple Checks Identity
 - Voice authentication
 - Facial recognition
 - Liveness detection
- **Protect.** Protects private or paid content, corporate networks and personal data.
- **Verify.** Supplements or replaces traditional online verification methods.
- **Simplify.** Standard PC microphones and cameras provide excellent facial images and voiceprints.

Accuracy

- False Accept under **0.1%**
- False Reject under **1%**

Speed

- **2-3 seconds** to complete
- Simple Enrollment

Liveness Detection

- Links **Video & Voice**

How Does WEBACCESS Work?

- **ADD** WebAccess can be added or replace traditional password logins.
- **ENROLL** To enroll, take one picture and record 3 short utterances (passwords)
- **COLLECT** When a user tries to access a secure service or content - Agent with WebAccess asks the user to pronounce a password and takes a smartphone picture of their face at the same time—multi-biometric data collection in just one click.
- **PROCESS** The voice and image templates are formatted algorithmically and sent to the cloud for processing.
- **ACCESS** If the matching results are positive, the user gains access; if not, access is denied
