Oxygen Forensic Suite 2014 Extends Acquisition Support for Apple iPhone 6/6Plus, Windows Phone, BlackBerry 10, Nokia and Android 4.4.4 Devices

Oxygen Forensics updates its flagship mobile evidence discovery solution, Oxygen Forensic Suite 2014, with additional extraction options. The new release adds or expands acquisition support for Apple iPhone 6/6Plus, Windows Phone and BlackBerry 10 devices, Nokia NBU backups and Android 4.4.4 ADB backups.

"Acquisition is a major stage in mobile forensics", says Oleg Fedorov, Oxygen CEO. "This release adds extended acquisition support for several ranges of mobile devices. We are committed to keeping our product at the cutting edge of technology, supporting new mobile platforms as soon as they hit the market."

The new release continues expanding mobile acquisition and data extraction options available to digital forensic specialists. The expanded acquisition support is available in all editions including Oxygen Forensic Suite, Oxygen Forensic Passware Analyst and Oxygen Forensic Extractor.

Support for Apple iPhone 6/6Plus, Apple iOS 8.0 and iTunes 11.4

The latest Oxygen Forensic Suite 2014 now includes preliminary support for the new iPhone 6/6Plus and all Apple devices supporting the newly released iOS 8.0, implementing data extraction, parsing and analysis of information.

Windows Phone Acquisition with 8.1 Support

Oxygen Forensic Suite 2014 enables live extraction of contacts and calls from Windows Phone devices including models running the new Windows Phone 8.1. In addition to previously available flash drive analysis, the latest version of Oxygen's award-winning tool adds acquisition support over cable and Bluetooth connection during a single acquisition session. Obtaining information over a wired and wireless connection allows extracting more data than is available over a single link. In addition, acquiring information from Windows Phone cloud enables experts to gain access to device messages.

BlackBerry 10 Acquisition

Acquisition support for BlackBerry 10 devices is also expanded with live data extraction. Forensic experts can gain full access to device contacts, messages, calls, calendar events, notes, tasks, file system and most popular applications data.

In addition to existing BlackBerry devices, the latest update adds forensic support for BlackBerry Z10, BlackBerry Z3, BlackBerry Z30, BlackBerry Q5, and BlackBerry Q10.

Android 4.4.4 ADB Backups

The newest Android build has been around for some time, with many newer models released with Kit Kat 4.4.4 on-board. Oxygen Forensic Suite 2014 adds forensic acquisition support for the latest version of Android, enabling investigators importing and parsing data from ADB backups created by Android OS 4.4.4 devices.

Nokia NBU Extraction

The Nokia brand is extinct, but many Nokia phones are still floating around. The updated Oxygen Forensic Suite 2014 adds the ability to import and parse data from Nokia NBU backups. Support for Nokia NBU backups enables investigators viewing backup data created with Nokia PC Suite including contacts, messages, calendar events, notes, tasks, file system and other available information.

About Oxygen Forensic Suite 2014

http://www.oxygen-forensic.com +1 877 9 OXYGEN +44 20 8133 8450

+7 495 222 9278

Oxygen Forensic Suite 2014 helps investigators and forensic specialists access and analyze data from a variety of mobile devices such as cell phones, smartphones, communicators, PDA and tablet PCs. Currently supporting more than 8,400 different models, Oxygen Forensic Suite 2014 covers the widest range of mobile devices compared to competition, and allows fully automated acquisition and analysis of supported devices.

The unique Timeline feature offers convenient, single-place access to all activities and movements performed by one or several users arranged by date and time. Investigators can track user location at every moment, build and map their historic routes, and clearly see all activities performed by the user at each location.

Another signature feature of Oxygen Forensic Suite allows investigators to perform a global search on all devices ever analyzed with the toolkit. The global search quickly reveals any connections (e.g. common contacts, exchanged calls, texts or emails) between the phone owners.

Oxygen's statistical analysis tools allow investigators discover social connections between the users of multiple mobile devices. Calls, text messages and various messengers' conversations are analyzed to produce charts and tables revealing the users' closest circle at a glance.

Oxygen Forensic Suite 2014 guarantees zero-footprint operation, leaving no traces and making no modifications to the content of the devices. This makes it the tool of choice among government and law enforcement agencies, security services, and forensic organizations in more than fifty countries.

About Oxygen Forensics, Inc.

Founded in 2000, Oxygen Forensics is the worldwide leading maker of the advanced forensic data examination tools for smartphones and other mobile devices. The company is dedicated to delivering the most universal forensic solution covering the widest range of mobile devices running Android, iOS, Blackberry, Windows Phone, Symbian and other operating systems. Law enforcement and government agencies, institutions, corporations and private investigators, help desk personnel and thousands of private consumers rely on Oxygen Forensics products to ensure evidence availability in the event of mobile device data analysis and recovery. Oxygen Forensics customers include various US and European federal and state agencies such as the IRS, US Army, US Department of Defense (DOD), US Department of Justice, US Department of Homeland Security, US Department of Transportation, US Postal Service, US Supreme Court, European Commission, London Metropolitan Police, French National Police and Gendarmerie, PricewaterhouseCoopers, Ernst & Young, and many others. As a result, Oxygen Forensic Suite receives great response at forensic conferences, exhibitions and trainings, and occupies a spot on the top of the list in relevant tests for extracting more data than competitors.
