regroup

The easiest, most effective solution for mass messaging and emergency notifications.

UNIVERSITY OF MONTANA

"We originally purchased Regroup solely for emergency notifications. When I arrived, I looked at the existing home-grown system and identified 18 failure-points. Thus, we started looking for a better solution." AND in response to the question: How does the speed and ease of use of sending out a message with Regroup compare to your previous system? Emergency: Night and Day! It works!"

Greenville Technical College

"The system we had was set up as opt-in and out adoption rate among students was less that 20%. Even with the Chief of Police handing out sign up information at orientation, we never cracked that percentage. Also, we had 6,400 seats in the system; adding enough seats to accommodate the entire school, as well as outside entities, was prohibitive."

Roane State COMMUNITY COLLEGE

"The main issue was the excessive licensing fees from our previous system and the previous system's lack of flexibility. With regroup, we can create groups for more than just emergency notifications and we are not limited by licensing."
