***Workplace Answers Utilizes OnRamp Managed Hosting and Private Cloud Services to Grow Business***

AUSTIN, TX – OnRamp, a leading high security and hybrid hosting provider with data center facilities in Texas and North Carolina, announced today the publication of a new customer case study featuring Workplace Answers. The case study details the reasons why Workplace Answers chose to migrate their collocated environment to Austin, Texas and incorporate the use of OnRamp’s managed hosting and private cloud services into the company’s existing IT footprint.

Workplace Answers provides industry-specific compliance solutions for enterprise, higher education, and government organizations. Working with over 10 million users and thousands of organizations for over 20 years, Workplace answers delivers award-winning training content, services, and software to develop more engaged workforces and minimize exposure from complex legal requirements. Prior to relocating to Austin, Texas, Workplace Answers relied on a colocation provider and a team of in-house IT professionals to manage the company’s Internet operations. Seeking a new provider in Texas, the company turned to OnRamp based on the data center provider’s ability to deliver customized IT solutions managed within an environment that would help Workplace Answers address a number of specific IT and compliance-related requirements necessary for interactions with their customer base.

“The use of OnRamp’s managed hosting and private cloud services has enabled Workplace Answers to refrain from storing anything locally; we offload the storage and maintenance of our development site, production site and everything required to run our business,” said Workplace Answers Engineering Program Manager Karunakar Pulsani. “And, with the addition of OnRamp’s private cloud solutions, we can quickly scale our operations as we develop new services and acquire new customers.”

OnRamp’s managed hosting solutions, which are backed by an experienced team of onsite engineers and technical support technicians, offers everything a business needs to keep its critical IT infrastructure running securely, reliably and effectively 24/7/365. Migrating to a managed hosting environment at OnRamp removed the need for Workplace Answers to maintain an internal team of IT professionals, thus enabling the company to save on operational costs and further benefit from OnRamp’s Full7Layer Support. And, incorporating OnRamp’s private clouds solutions provided a number of additional benefits to Workplace Answers’ managed hosting environment housed within one of OnRamp’s state-of-the-art data center facilities. OnRamp’s private cloud solutions provide the economic benefits of virtualization, the control over one’s own dedicated equipment and the private, secure environment with which to run it.
