

A Personalized Experience with Photography Editor by Black Mountain

Now Optimized for Intel® Atom™ Processor-Based Tablets for Android*

The development team at Black Mountain has collaborated with Intel® to optimize its picture manipulation app, Photography Editor, for Android* tablets powered by Intel® Atom™ Processors. Users will now benefit from a wide range of image editing options provided by this creative app.

Photography Editor allows users to edit previously saved pictures, as well as ones just captured in the moment. There are three simple steps that get users off the ground and running: LOAD, EDIT, and SHARE. Fundamental edit options, such as saturation, brightness, color, and size are available at users' fingertips. More detailed possibilities, some of which are comical, include wigs, hats, glasses, different eyes, mouth choices, and teeth. Effects such as rain, snow, and falling leaves can also be added. Collages can be created from the saved photo gallery images.

Frame a Unique Masterpiece to be Shared, All on Android*

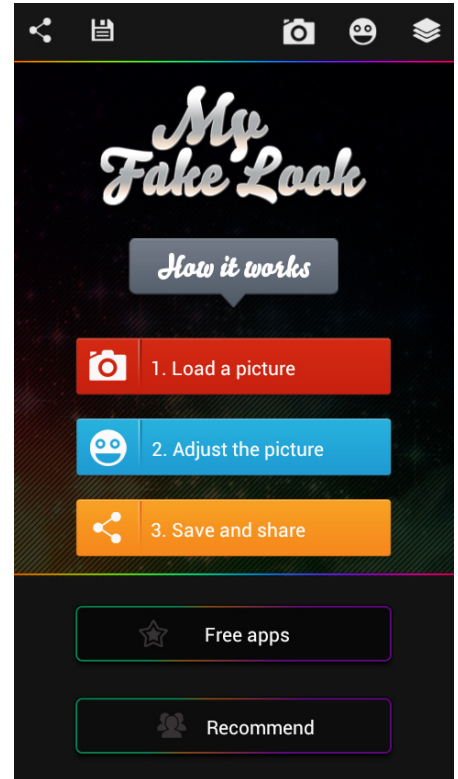

Once a picture is enhanced precisely as users want, they then have the option to add personalized writing on it, as well as a choice of an assortment of frames as a finishing touch. From there, the final image can easily be shared via email, Facebook, or Twitter. Photography Editor is now available for download, and the high resolution graphics provided by Android* devices will ensure all edits being made are not only exact, but also fun to do.

Features of Photography Editor for Android* tablets powered by Intel® Atom™ Processors
