November 26, 2014

OceanWorks To Provide Storage, Maintenance And Inspection Of Key Components Of Recently Delivered Subsea Autonomous Dispersant Injection (SADI) System

OceanWorks International has been contracted by the Marine Well Containment Company (MWCC) to supply a storage and maintenance facility for the Battery-Powered Pump Skids, an integral component of the Subsea Autonomous Dispersant Injection (SADI) System recently delivered by OceanWorks. This facility will allow the equipment to be conveniently stored, maintained, and inspected to ensure readiness for use.

The unique construction of the facility, with an insulated and air-conditioned inner storage structure within a weatherproof steel building, will ensure that the SADI system components are stored at the optimal temperature range. The facility will also have 3 fully insulated access doors, allowing movement of the stored equipment for either deployment or servicing.

OceanWorks International is a subsea solution engineering company, providing more than 20 years of service to the Oil & Gas, Military, Scientific, and Environmental markets. For more information regarding OceanWorks International's products and services visit our website, www.oceanworks.com, or contact us at sales@oceanworks.com.
