FOR IMMEDIATE RELEASE

Atlas RFID Solutions Expands Functionality to Address Critical Issues for Industrial Construction

Inspections, Preventative Maintenance and Forecast Reporting
Among Key Features Now Available in Material Control Solution

Birmingham, Ala., December 5, 2014— Atlas RFID Solutions, the world leader in comprehensive field mobility and Auto-ID solutions for industrial construction, today announced it has significantly expanded the functionality of its flagship product, Jovix™, to address additional material control challenges on projects across the globe. The new features support mobile inspections and preventative maintenance, managing and resolving overage, shortage and damage issues, and predicting future material availability issues through supply and demand forecasting.

The 2014.2 release of Jovix™ also enhances the ability to import drawing data from engineering tools as well as add and manage attachments within the application. Finally, the mobile tablet interface has been updated to provide a more consistent and user-friendly experience making it easier for Jovix™ to extend material control capabilities to the field and eliminate manual, paper-based processes from the jobsite.

"The functionality contained in the new release is a natural extension of the product and specifically addresses challenges raised by our clients. The ability to execute preventative maintenance activities on the tablet, for example, was added after a customer's internal study determined that 50% of preventative maintenance time was being spent locating materials, which is something that Jovix Mobile™ has always done well," said Josh Girvin, Senior Vice President of Product Management for Atlas RFID Solutions. "With the addition of this new functionality, Jovix™ is now able to provide continuous visibility and control throughout the entire material lifecycle from fabrication through installation."

Jovix™ delivers overall project efficiencies by enabling positive material control, which is made possible by providing unprecedented access to actionable, up-to-date information about the availability, status and location of materials in the global supply chain. To find

out more about the new functionality or to learn more about the Jovix™ solution, visit www.atlasrfid.com.

About Atlas RFID Solutions

Jovix™ is an award-winning material control application developed by Atlas RFID Solutions specifically for the industrial construction market. Jovix™ combines web-based server software with mobile and auto-ID technologies to extend access to information to decision makers in the field, as well as digitize and automate manual paper-based data collection processes. Jovix™ provides value for Owner/Operators, EPC firms, contractors, fabricators and suppliers by removing impediments to productivity that result from material readiness issues.

To learn more about Jovix™, Atlas RFID Solution's material control application used on more than 175 sites across the globe, and how it helps industrial construction projects increase efficiency, protect schedule and reduce unnecessary costs, visit www.atlasrfid.com or call +1 205-383-4428 in the US or +1 587-487-5737 in Canada.
