

The Majesty of the Night Sky with Stellarium Mobile Sky Map by Noctua Software

Now Enabled for Intel® Atom™ Processor-based Tablets for Android*

There is no bigger frontier of discovery than space, but the naked eye can only see a tiny fraction of the beauty and mystery of the planets, stars and galaxies. The Stellarium Mobile Sky Map app makes the unseen, awe-inspiring views possible in a whole new way. Recently enabled for Android* tablets powered by Intel® Atom™ Processors, this app delivers the breathtaking sights and facts of our universe directly onto tablet screens. It places a planetarium right in the palm of user's hands.

Using GPS tracking, the app allows users to point their devices at a location in the sky and view asterisms and beautiful constellation illustrations from different cultures. It displays information about over 600,000 stars in real-time with zoomable maps. The application presents vivid 3D renderings of the planets in our solar system with their landscapes, atmospheres and statistics in striking detail. Other features include longitude and latitude, and a search engine for finding stars, planets, galaxies, nebulae and other satellites. Users can expand their knowledge and appreciation of the night sky in all its glory with this impressive digital instrument.

A Telescopic View of Space on High-definition Tablets

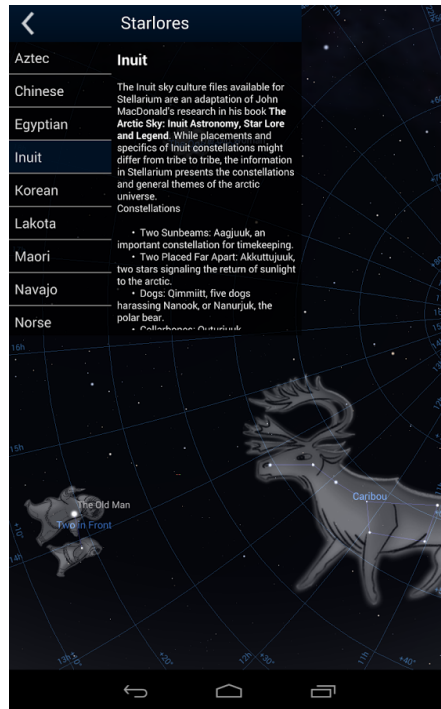

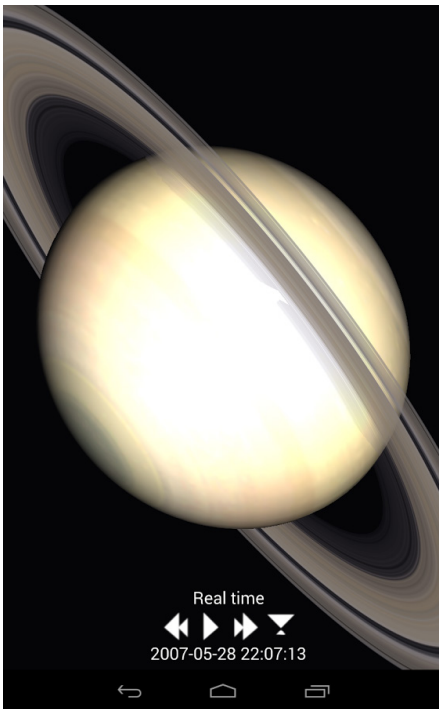

The spectacular views of the night sky achieve their full vibrancy on the crisp, high-resolution screens of Intel Atom Processor-based tablets for Android*. The sensitive touch screen makes it easy to manipulate the sky maps with smooth tap-and-drag action. The latest designs offer sleek, lightweight portability so stargazers can travel to remote locations without difficulty. All the power of this platform, equipped with fast Intel Atom Processors, exhibits the tremendous beauty and depth of the cosmos.

Features of Stellarium Mobile Sky Map for Intel Atom Processor-based Tablets for Android*

- 3D Renderings of Planets in the Solar System
- GPS Tracking for Identifying Stars and Planets
- Asterisms and Constellation Illustrations
- Astrological History for Multiple Cultures
- Search Engine

The Universe Unveiled with Stellarium Mobile Sky Map on Android* Tablets powered by Intel® Atom™ Processors

Now, the extraordinary images of the night sky light up the latest tablets. Elegant and efficient, these devices provide a solid platform of performance so that users can explore the outer reaches of space for hours. By downloading the Stellarium Mobile Sky application to their Android* tablets, seekers can unlock the mystery and magnificence of the night sky.
