

INTRODUCING THE
FLUSH GAS ON STEEL
COOKTOP

Fisher & Paykel

1 Perfect Results

This cooktop has five different burners with a variety of strengths. The uniform flame and even heat distribution of the dual flame wok burner combined with highly responsive dials offer precise heat adjustment that perfects the slow simmer for sauces to the intense heat required for searing steaks and wok cooking.

2 Designed to Match

This Gas on Steel Cooktop provides a flush look with burners recessed into the kitchen work surface offering an uncluttered and integrated environment. The brushed stainless steel provides a modernist aesthetic with design for durability, matching the rest of our family of kitchen appliances.

3 Easy Cleaning

These cooktops are designed as a single piece of laser cut stainless steel with quick component removal for easy cleaning. Durable and easy to clean, cast iron trivets provide a safe and stable cooking surface. Rubber feet prevent the trivets scratching the cooktop.

4 Precise Control

Simply turn the dials for the Auto-ignition system to ignite the flame quickly and safely. Innovalve™ technology allows you to adjust the flame with 180 degree gas valve rotation compared with 70 degree in most gas cooktops for accurate temperature control.

5 Safe and Sound

The dials will glow red when on, and white when off, showing at a distance which burners are lit. The Auto-reignition system means you don't have to hold down a dial while burners ignite and if a burner goes out, it is automatically relit at the original flame setting.

6 Accessories

A small pot stand and wok support are provided with this cooktop.

SEAMLESS INTEGRATION

Designed to complement the Fisher & Paykel family of kitchen appliances, this cooktop integrates perfectly into your work surface providing a subtle unobtrusive design. With power levels for everything from a slow simmer for sauces, to an intense heat for steaks and stir-fries, combine sleek design with excellent functionality.
