Cord2Go Lightning KeyChain Cable

We all know how messy charging cables can get on desk. Also, Apple's Lightning to USB cables are pricey so buying multiple of them require big pockets and most importantly when we really need a cable we don't find it near us. These all problems lead to design this new product that can be with us all the time. It is compact and it works. It goes where you go.

The Cord2Go lightning KeyChain is Apple MFi Certified compact and lightweight cable designed for all Apple iPhone, iPad and iPod devices for fast sync and charge. This is so small that you can literally take where ever you go. Whether it's a car USB, notebook, multiport charger or Power Pack, you can use it anyway and you won't ever feel extra burden of carrying USB cable.

That's not all, the added feature of this design allows for full data transfer when connected to a PC and the hollow space at one end allows for ease of carrying by a metal loop. Each of the two connectors snaps into a slot on an end, one connector a USB and the other a Lightning connector.

Some common feature.

- Apple MFi Certified. Compatible with iOS8
- Fast sync and charge cable
- Compact, slim, Lightweight and easy to carry.
- Supports charging/syncing from all USB ports. No Apps/Software required.
- Tangle free cable.
- Can act as keychain.
- Comfortable and user friendly design.
