

PASSPORT

INVENTORY MANAGEMENT + ASSET TRACKING PASSPORT

Complete. Configurable. Scalable. Local or Hosted Data.

Turn the tracking, storage, maintenance and distribution of inventory, stock, assets and items into a science. Detailed, real-time metrics and custom reports improve efficiency and accountability for your operations.

WHY ASAP SYSTEMS?

ASAP Systems for inventory management and asset tracking is a fully customizable, barcode-based and RFID-capable system. You choose where to manage your inventory and asset data: on your server or desktop PC with ASAP Passport, with our web-based application ASAP BarCloud or on your smartphone or tablet with our new ASAP BarCloud App. Our software helps your organization or business to:

- Be more efficient: Using barcode or RFID technology, quickly scan and enter your inventory and data.
- Be more accurate: Minimize the risk of employees mistyping data or entering incorrect information.
- Improve workflow: Share inventory and asset reports, status and updates with employees, managers and vendors anytime, anywhere.

USER CONFIGURABLE

Configurability is built-in, which means no custom software fees. Rename data fields and enable user-defined fields. Turn functionality on and off if you don't use it. Adjust the viewing and functional preferences for each user, such as data columns and reports.

SCALABLE, FLEXIBLE MODULAR DESIGN

Start with one user on a standalone PC or grow into unlimited users in a networked environment. Use online as a cloud computing application and as a mobile app. Track hundreds of items at one location or millions of items across multiple locations.
