

Enable Rapid Growth

Actionable, easy to understand data gives your support teams the insights they need to improve user experience. In addition, once usage patterns are understood, better policies can be created to drive growth in collaboration and productivity.

Control Operating Costs

Webex costs consist of audio, licensing, and storage components and can involve multiple vendors and complex pricing schemes. The first step to controlling these costs is to know the sources and be able to measure the impact of changing policies.

Simplify Reporting and Compliance

vAnalytics' clean and intuitive interface brings compelling charts, graphs, and interactive data to your screen in an instant, and these can be exported and used to drive organizational goals and meet compliance requirements.

vAnalytics™ Monitors:

- Call Minutes and Types By Month
- Call In, Call out, Toll, Toll-free, VOIP
- Meetings and Meeting Minutes
- Most and Least Frequent Users
- Top 10 and Bottom 10
- License Capacity and Usage
- Registered vs Active Users

Features:

One Single Interface for all Collaboration Analytics | Customizable panels and graphs that persist after logging out for individual user dashboards | **Highly accurate data** | Cloud-based, simple deployment that scales to any size | **Data connection in Minutes, not Days** | Free Install, Updates & Maintenance

Fast, Responsive and Clean Interface

Vyopta Cloud Architecture

The Vyopta collector is a lightweight piece of software that sits on internal servers to constantly monitor and periodically transmit key video communication parameters securely to the Vyopta central cloud. The data is then processed, cleaned, and stored for up to 8 years. In most video systems, data lives only on the device memory that fills up unpredictably, making native performance analysis impossible. vAnalytics pulls from all points in the network for 360° visibility. After processing, the data is sent back in a secure HTTPS communication channel to the Vyopta web portal for customer consumption. vAnalytics deployments are based on video capacity, so vAnalytics adds the value to network management for video networks of any size.

Simple | Secure | Lightweight | Fast
