

Master Data Management Baseline Deployment Package

Overview

Master Data Management (MDM) comprises the processes, governance, policies and standards needed to consistently define a single view of critical business data. It is an essential discipline that involves both technology and key business experts. Getting off to a solid start with an architecture engineered for future growth can be the determining factor for MDM project success. A verified development installation with the correct initial configuration for your needs will help streamline your MDM project. SSG's MDM Baseline Deployment offering provides the support you need to lay a firm foundation for your MDM success.

Our Value Proposition

Our Senior Consultants provide added value to an MDM deployment due to their wide experience in the technologies and the business problems solved by MDM. They provide deliverables, planning and best practices that will be useful far beyond the deployment. Bring confidence to your MDM project with our expertise.

Key Program Deliverables

- ▼ Verified MDM Hub Software development installation
- ▼ Preliminary architecture documenting initial MDM configuration options
- ▼ Installation and architecture documents and knowledge transfer

Benefits

- ▼ Proficient SSG Consultants provide Master Data Management knowledge, bootstrapping you through installation and configuration
- ▼ Proven methodologies and quality deliverables
- ▼ Verified development environment as well as a baseline for future growth and planning
- ▼ Managerial oversight and a direct escalation and communication path inside SSG

Typical Duration

- ▼ 4 Weeks

Staff Level

- ▼ Senior Consultant

Key Program Details

SSG will assist in the deployment of the Informatica MDM software solution by providing expert assistance in the installation of the Informatica MDM core components. We will work with key business experts to create a foundation MDM architecture document outlining the preliminary configuration. This architecture will serve as a solid basis to build on as your solution evolves.

With the support of your Database Administrators, System Administrators, and business experts, SSG will execute the following:

- ▼ Review and verify the installation pre-requisites and the installation process with the administrators, resolving any open questions
- ▼ Validate the infrastructure as related to the Informatica PAM (Product Availability Matrix)
- ▼ Install the Informatica MDM Hub software in one development environment
- ▼ Review business requirements to create a foundation architecture documenting the appropriate MDM configuration
- ▼ Create a post-installation document for reference
- ▼ Knowledge transfer on the installation and architecture

About SSG

Founded in 1997, SSG is a Dallas-based Informatica Elite Business Partner and Oracle Gold Partner with consulting practices specialized around Data Management (Informatica Platform) and Billing and Revenue Management (Oracle BRM).

Our Data Management Practice is both an Informatica Channel Partner and Informatica Consulting Partner. We focus on solution sales and delivery around the Informatica Platform and related Informatica Professional Services addressing Data Integration, Data Quality, Information Lifecycle Management (ILM), Master Data Management (MDM) and Cloud Integration.
