

INNOVATORS IN BRUSH TECHNOLOGY

NAMPOWER™

Abrasive Nylon Disc Brushes

NOW AVAILABLE IN SMALLER DIAMETERS!

Brush Research is pleased to announce that our high performance disc brush line has expanded to include a selection of small diameter tools. The new brushes are available in 50mm, 60mm and 80mm in both the Dot and Turbine style configuration. A new specialty flow through tool holder with a 16mm shank is also available to accommodate these smaller diameter tools. Brush Research Nampower brushes are made of a combination of ceramic and silicon carbide abrasive nylon mounted to a fiber reinforced thermoplastic base. These smaller diameter disc brushes will offer greater versatility into harder to reach areas, smaller applications and planetary head mountings. The best just got better.

FLOW THROUGH TOOL HOLDER

PART ID

11799

SHANK DIA.

16MM

HOLDER TYPE

STANDARD COLLET

Designed for both Dot and Turbine style miniature disc brushes. This unique reusable holder allows coolant to flow through from the brush center resulting in better lubricant dispersion over typical disc style brushes. Holders are heat treated, precision ground and have a PVD coating for improved corrosion resistance.

FILAMENT OPTIONS

SILICON CARBIDE/ WHITE CERAMIC

Excellent value with increased tool life over standard Ceramic while maintaining superior cutting performance.

Available in Grits: 80, 120, 180, 320

SILICON CARBIDE/ BLUE CERAMIC

Providing more aggressive cutting action over standard Ceramic and the increased tool life due to the resiliency of SC.

Available in Grits: 80, 120, 320

BLUE CERAMIC

An ideal solution for applications that require decreased cycle time and more brush aggressiveness.

Available in Grits: 80, 120, 320
