

UltraShipTMS Private Fleet Management

UltraShipTMS brings unmatched private fleet management functionality to shippers employing a mixture of common carrier and private/dedicated fleets as part of a comprehensive TMS application. Don't pay to maintain two disparate solutions - TMS for common carriers and a fleet management tool for private/dedicated - when there is one, award-winning tool to accommodate both.

UltraShipTMS fleet management capabilities include:

Dispatching – integrate with driver communications to determine current available hours and stay compliant with Hours of Service rules

Backhaul management – tender, dispatch and track/trace backhauls and generate invoicing for backhaul customers straight from the UltraShipTMS application

Driver payroll – manage all driver payroll processing functions including base pay, stop pay, unloading charges, expenses, etc. UltraShipTMS integrates with leading 3rd party payroll processors

Driver & equipment history & management – keep on top of driver location, availability and status as well as fleet assets and all relevant asset maintenance records

Vehicle tracking* – monitor tractor movements via Qualcomm and trailer movements using shipment histories to determine last known location. UltraShipTMS integrates with GPS tracking providers too!

Communications – transmit and receive messages using all industry standard protocols including EDI, XML, SOAP and 3rd party connectivity via Qualcomm

*through 3rd party integration

Used together with the award winning LoadFusion Transportation Optimizer tool, no other single solution offers better visibility, control or results for shippers than UltraShipTMS; especially for companies using private/dedicated fleets and common carriers for their transportation needs.
