Fire Alarm Control Panel Systems Training®

Florida MEP's Fire Alarm Control Panel Systems Training® provides firefighters and first responders with **interactive, hands-on instruction** on various fire alarm control panels and fire alarm devices.

The training program can be conducted during a three-hour session held on-site at any fire station or training facility and includes instructional material and demonstration interfaces not covered in traditional firefighter training programs.

Developed by the Fire Alarm Systems Institute, an affiliate of Florida MEP, the curriculum and interactive fire alarm control panels used in the training were created by a team of New England fire safety professionals with a wide range of experience in fire response operations, training and fire alarm systems and their components.

What is the fire alarm panel telling me?

What does the flashing light mean on the monitor module?

What do I need to do?

Hands-on experience with demo Fire Alarm Control Panels is provided during the training.

Subjects Covered in the Fire Alarm Control Panel Systems Training®:

- Firefighter interface with the fire alarm control panel
- Conventional vs. addressable systems
- Different types of alarms and fire alarm systems
- Detection devices: how they operate and what a first responder should look for
- Firefighter elevator safety
- The value of UL/ETL listed and FM-approved systems
- Firefighter exit procedure
- Firefighter interface with radio and 100 mil master boxes.

The Florida MEP FASI Fire Alarm Control Panel Systems Training® was developed by five dedicated fire safety professionals with decades of experience in firefighter training, fire response operations and fire alarm systems.

Read what first responders are saying about this training:

"This was a great seminar. I didn't know how much the fire panel could help me to perform my job."

"We learned a lot about specific panels and problems that occur in our districts that we had no answers for or anyone to explain it to us. You and your course did."

"I got to have hands-on experience with the panels."
