

EasyVote Solutions Releases its Newest Software Module, EasyFocus, to Assist in Election Planning & Readiness

EasyVote continues to meet the needs of its election customer base by releasing its latest cloud-based software module, EasyFocus.

EasyFocus combines project management, task management, reporting dashboards, online surveys, deadline notifications, and mobile technology to help election directors have a productive election. With one view, election directors are able to see all tasks, a task holder's progress, as well as overdue tasks. EasyFocus will direct election officials to priority tasks.

"EasyFocus was built from the ground up on cloud services to automate the management of the elections office," said Chief Technology Officer Chuck Giddens.

EasyFocus utilizes mobile technology to instantly push information to the managers in the field via Android and IOS native applications.

Setup for EasyFocus is streamlined by offering wizards for importing poll workers as well as other important information. Also, EasyFocus utilizes intelligent reporting and exporting tools to create customized reports.

An innovative feature allows election managers to customize the software local nomenclature. This nomenclature will be used throughout the dashboards and reports making it familiar to all users.

"We have always said that our software should mimic our customer's processes and not have customers change their processes because of software" said Ron Davis, Chief Executive Officer for EasyVote.

About EasyVote Solutions

EasyVote was founded with the mission of creating a world class elections platform to be used in both pre and post elections process. Whether you have 5,000 voters or 500,000, EasyVote provides the data you need, when you need it, taking the labor, guesswork and margin of error out of your elections process. EasyVote is headquartered in Atlanta GA.
