

Wi-Tronix®, LLC Hosts 4th Annual Users Conference

BOLINGBROOK, Ill., April 21, 2015 - Wi-Tronix®, LLC will host its fourth annual Users Conference May 4 through 6 at Indian Lakes Resort and Spa in Bloomingdale, Ill. At the three-day conference, representatives from shortline, Class I, commuter and passenger long-distance railroads will receive hands-on training to better understand the benefits of the Wi-Tronix system.

The Wi-Tronix system offers both hardware and Software as a Service (SaaS) through its Wireless Processing Unit (Wi-PU™) and website. Customers connect the Wi-PU to their existing onboard subsystems. Wi-Tronix integrates with the systems and sends data wirelessly to the Wi-Tronix back office so users can receive alerts and information in real time.

The conference offers multiple track sessions to teach Wi-Tronix users how to further leverage their deployed systems and the data they receive. Through the Wi-Tronix website, data is organized and presented in a way that it becomes actionable information for railroads and marine operations.

Conference attendees can also expect two opportunities for small group training. Tracks and training offer hands-on demonstrations, use cases and benefits of the system. The sessions cover a range of topics including system health and diagnostics, on-demand event recorder/DVR downloads, fuel saving strategies, system and specialized vehicle integration, GPS Train and mobile phone detection.

Each course covers how users can utilize the Wi-Tronix system to drive safer operations, reduce operating costs, provide enhanced service reliability to customers and improve environmental sustainability.

This year's conference will showcase recent features of the Wi-Tronix system, like Google Maps tools, as well as planned features that will be released in the upcoming year such as In-Cab Audio.

About Wi-Tronix, LLC

Wi-Tronix, LLC, global headquarters in Bolingbrook, Ill., provides products and services to wirelessly monitor high-value mobile assets for rail, marine and other commercial and industrial operations. Worldwide, Wi-Tronix monitors over 8,500 high-value mobile assets valued over US \$15 billion. Wi-Tronix's mission is to enable businesses to improve the operational efficiency, service reliability and safety of high-value mobile assets.
