**Atlas RFID Solutions Announces a New Product Release for
Modern Materials Management Solution**

Expansion of Jovix™ Enhances Visibility of Information, Enabling Management by Exception

Birmingham, Ala., April 22, 2015— Atlas RFID Solutions, [the world leader in modern materials management for industrial capital assets](#), today announced it has significantly expanded the functionality of its flagship product, Jovix™. The 2015.1 release of Jovix™ includes enhanced business intelligence dashboards and reporting capabilities, which can be configured to provide value for a wide range of stakeholders throughout the material lifecycle. The key value of this new release is an expansion of the ability to quickly turn vast amounts of data into actionable information, which is displayed in a single convenient location.

The 2015.1 release includes new features aimed at improving the ability to identify issues and resolve them before they impact construction. Jovix™ 2015.1 includes a dashboard with configurable, personalized widgets that automate the process of highlighting issues on an exception basis in a graphical, easy-to-consume format. A series of reports linked to the dashboard charts and graphs enable users to quickly drill down into issues and initiate the resolution process—saving valuable time and money by increasing productivity and efficiency on the jobsite.

Senior Vice President of Product and Market Strategy Josh Girvin states, “Modern materials management is all about the ability to transform data into action in order to resolve issues before they impact construction. With Jovix™, data is collected in real-time, automatically processed into actionable information, and presented in a graphical exception-based format that facilitates investigation.”

This release adds value to the resolution process with enhancements to the application’s task management capabilities. Overall, Jovix™ 2015.1 continues to make great strides in supporting our customer’s ability to flag and resolve material readiness issues before they impact direct labor productivity.

The functionality included in this release allows clients to enhance the value of their data through automated processing and graphical, exception-based presentation. This provides visibility and accessibility to all stakeholders in a single shared view, making projects more efficient.

Girvin adds, "We are focused on eliminating paper-based reports and the errors and time lag that comes with them, and focused on helping construction embrace the technology available to them to make better decisions in real time."

About Atlas RFID Solutions

Jovix™ is an award-winning materials management application developed by Atlas RFID Solutions specifically for the industrial asset market. Jovix™ combines web-based server software with mobile and auto-ID technologies to extend access to information to decision makers in the field, as well as digitize and automate manual paper-based data collection processes. Jovix™ provides value for Owner/Operators, EPC firms, contractors, fabricators and suppliers by removing impediments to productivity that result from material readiness issues.

To learn more about Jovix™, Atlas RFID Solution's modern materials management application used on more than 200 sites across the globe, and how it helps industrial construction projects and operating assets increase efficiency, protect schedule and reduce unnecessary costs, visit www.atlasrfid.com or call +1 855-568-4151 in the US or +1 587-487-5737 in Canada.
