

BENEFITS

- Invoice Accelerator document capture solution with OCR automatically extracts data from scanned paper and electronic PDF files. The Vendor Identification feature speeds up invoice data capture and reduces and/or eliminates invoice manual data entry.
- A browser-based user interface allows global access to documents, as well as processing and approval of invoices without third-party apps.
- Available as an on-premise or cloud-based implementation.
- Integrates with NetSuite throughout the workflow process to populate and/or validate invoice and PO-related data directly from NetSuite, eliminating replication of data.
- Export modules can automatically create complete transactions in NetSuite as invoices are approved and finalized.

About Metafile

Established in 1979, Metafile Information Systems, Inc. is a pioneer in the invention and development of paperless document management applications serving accounts payable (AP), accounts receivable (AR), and human resources (HR) departments in the middle and enterprise markets. More than 15,000 financial professionals worldwide are efficiently processing more than 15,000,000 paperless transactions per week with the MetaViewer Paperless AP, AR, and HR solutions.

We work with companies comprised of between 50 and 500 employees that process a high volume of documents and seek to make their business more efficient by using document automation tools with NetSuite.

For more information, please visit www.suiteapp.com.

MetaViewer works with NetSuite by capturing all AP and AP-related documents electronically, which allows for seamless access to all document images directly from NetSuite screens. Document images automatically attach to NetSuite transactions with a simple URL link.

Metafile's MetaViewer document management solution offers paper and electronic invoice capture, web-based workflow, real-time visibility, two- and three-way matching, and full ERP integration making MetaViewer a complete AP automation solution. It supports AP and AR departments by automating workflow, and boosting transparency and accountability, leading to reduced costs, improved customer service, and increased vendor satisfaction. MetaViewer works with NetSuite by capturing all AP documents electronically, which allows for easy access to all document images directly from NetSuite screens. Document images automatically attach to NetSuite transactions with a simple URL link.

"The interface between the Metafile OCR capabilities and NetSuite works very well. With NetSuite, when we processed a bill, we could hit save and we'd instantly see it in the general ledger. MetaViewer allowed us to maintain that simplicity as we transitioned to OCR."

—Denise Curran, Controller, Nobel Learning Communities

Metafile's MetaViewer has several key features that make it an ideal solution for organizations in manufacturing, retail, distribution, healthcare, and education.

- Paper and electronic invoice capture eliminates manual data entry
- Web-based workflow streamlines efficiencies and enables global access
- Real-time visibility to the entire accounts payable (AP) process ensures rapid response time
- Users can retrieve all documents without leaving their NetSuite ERP solution
- MetaViewer expands to AR, HR, and payroll to achieve complete Paperless ERP
