TRACK STAR INTERNATIONAL RELEASES AVLS VERSION 6

Charlotte, NC: Track Star International, Inc. is pleased to announce the release of Version 6.0 of the Automatic Vehicle Location System (AVLS) software product.

This important new version of the Track Star AVLS system provides customers with an impressive array of important new features and capabilities. While retaining the long standing affordable, private, powerful and flexible hallmarks of the AVLS system, Version 6.0 provides a new capability that offers web browser based access to the system in addition to the traditional thick client software.

By using state of the art software development tools and techniques, Track Star has been successful in crafting a browser based user interface to the system that can be accessed by virtually any device with a web browser without requiring an "app".

Beyond this important new capability, Track Star has taken full advantage of advanced technologies related to computer generated mapping and now offers the ability to overlay map data such as weather onto the user display dramatically increasing the situational knowledge for dispatchers, fleet administrators and other users.

Version 6.0 also introduces a work order function that allows users, through the use of an Application Programming Interface (API), to integrate other systems in the organization so that

locations where workers are needed are displayed on the map along with vehicle location and status.

All Track Star customers receive this important new release either directly or through their Authorized Track Star dealer. For more information about this new release or about Track Star products in general, please visit our website at www.trackstar.com or call our office at 1-800-661-3515

About Track Star International, Inc.

Track Star is a Charlotte, NC based high-technology software development company, specializing in providing highly advanced, yet affordable, GPS vehicle and asset tracking solutions to customers in the Utility, Law Enforcement, Public Safety, Municipal and General Transportation market verticals. Its flagship product, the Track Star AVLS system, offers real time tracking of vehicles and other assets to enhance safety, productivity and efficiency. The company has been involved in the development of these systems since its founding in 2000 and relocated to Charlotte, NC in 2009.
