# bevo pos

A Complete Solution

- EMV, NFC options provide the new standard of credit card acceptance.

- Seamless Integration with Apple Pay.

- Merging checks, transferring tables and splits by check or seat can be done in a few clicks.

- Intuitive, organized, and fully redundant, syncing real-time, between and among terminals and with the cloud.

- All terminals can be used for all jobs, from menu changes and bar orders to data analytics.

- Data analytics effectively presented in dashboards are in-depth and can be customized to even finer detail if needed.

- Bevo POS offers full integration with online ordering, increasing profits and exposure.

- Seamlessly integrates loyalty programs and gift cards.

- Ensures complete protection against power-outage/surge without loss of data.

Intuitive, Organized and Fully Redundant

Franchise owners are a unique breed. They come with a distinct knowledge-base within their concept and have specific benchmarks for success and reporting to the Franchisors. Bevo POS, not coincidentally, was designed for franchise owners by a franchise owner, because what had been available couldn't meet these needs in the format desired. As the foremost franchise POS, it is intuitive, organized, and fully redundant, syncing real-time, between and among terminals and optionally with the cloud as well. Therefore, it is guaranteed to continue functioning regardless of internet connectivity or server failure, without loss of data.

Manage. Profit. Grow.

BEVO POS Features

BEVO Point-of-Sale solutions helps you address every customer service and management need in your restaurant. It represents the industry's best platform for speed of service, reliability, performance and value. Bevo POS instantly delivers orders to the kitchen's printer and display, can create combo menu items, time-specific specials (early-bird), efficient order entry, error-free recall, and effective tender on the order screen, resulting in better quality control and happy customers.
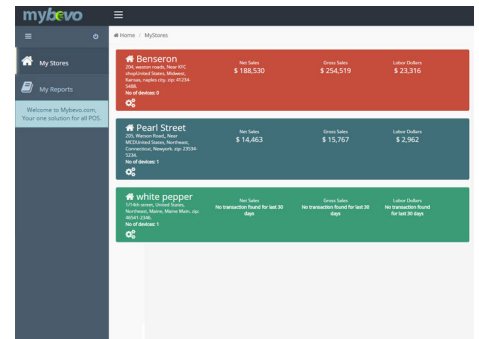

Dashboards

Restaurant owners can monitor real-time and historical sales data. Get an alert if a location exceeds discount or void maximums. Allocate labor based on transaction and customer numbers. Provides the necessary data to make decisions and plan accordingly.

Reports Menu

Restaurant owners can view all reports quickly including historical sales for select time periods (yearly, quarterly, monthly, and daily) for their location. Monitor voids, discounts, the most popular items and employee sales from this snapshot.

Quick Stats

Quick-stats is designed for franchisees and restaurant owners who own more than one location. Compare all basic stats, net sales, gross sales and labor dollars for all stores. This helps determine how to allocate labor or inventory from one snapshot.

Apple Pay
Apple's mobile wallet app on iPhone and iWatch for convenient, secure, contactless payment with the credit card of your choice and our NFC card reader.

EMV
EMV is the global standard for card security. Established in Europe, it's slowly making its way to the U.S. We are adopting it immediately for use with our EMV card readers for the highest level of data protection for cardholders and business owners.
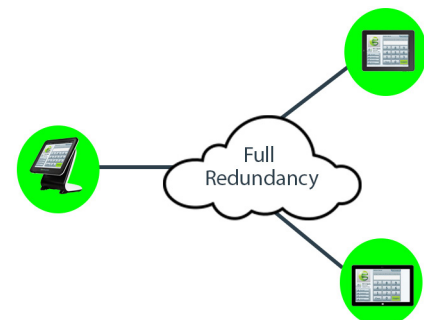

NFC
Mobile wallets such as Apple pay and Google wallet require NFC readers to process payment. We've adopted these technologies within our system to offer an additional layer of security for credit card protection.

Full Redundancy
The only fully-redundant POS on the market. All terminals communicate with one another within the network and with the cloud, real-time, so every machine is always current, store-wide. If one machine freezes, all others continue to operate normally including all pending transactions. No down-time, no restarting.

Outstanding Performance • Reliable • Fully Redundant • No Down-time • 24/7 Support

Display Terminal
Ultra-modern with Customer Facing Display and Credit Card Swiper

Windows Tablet
BEVO's 7" or 10" Windows Tablet with Credit Card Swiper
