At Axis we support a variety of real estate, title and mortgage industry solutions for title plants, title agents, title insurance, real estate brokers, mortgage lenders, credit unions and oil and gas land management.

IN-DEPTH INDUSTRY KNOWLEDGE, AND TECHNICAL EXPERTISE

Within these branches of title, mortgage and legal industries we have improved processes that involve procedures like mortgage processing, land services, and settlement services. Our solutions also address a variety of implementations for account openings, loan processing, payment solutions and range of administrative tasks such as loan and escrow processing, and back office operations.

DOCUMENT INTENSIVE PROCESSES

Axis has tackled many of the challenges pertinent to the document intensive processes inherent real estate information systems. In today's very competitive real estate and mortgage lending, you would be challenged to find an industry burden with more documentation and regulation. As a sampling, in many cases, they have to deal with the following document types: public records, leans, maps, tax forms, utilities records, trust deeds, closing statements, insurance forms, settlement statement, HUD forms, property reports, deeds, assessors files, property and legal & vesting reports. Moreover, the list goes on and on. It is no surprise that these industries are moving to integrated and automated document management systems.

"There has never been a time when you have not been able to meet our needs in a timely and professional manner."
Senior Vice President and CIO, Lending Tree

WHAT WE DO BEST

Axis' product and service offerings are ideally suited to the conversion and migration of property records typically housed and maintained by title insurance companies and title plant providers.

As an example, Axis provided strategy, development expertise and project methodology in the conversion of a legacy mainframe application holding more than one billion real estate transaction records in more than 500 U.S. counties to a distributed server environment using the state of the art Microsoft framework.

Axis services and software solutions address the full spectrum of proven methods to address the countless challenges faced by the real estate market. With over 12 years of experience, Axis has offered its customers a range of solutions to address their individual and unique environments. Areas tackled included software system integration, document imaging and ECM implementations, advanced data extraction, workflow/bpm process improvement, electronic signature and data mining to name a few.
