

Reach your true potential! Clinical Conductor CTMS centralizes all trial management activity being conducted across multiple departments. Streamline project management, ensure billing compliance, setup individualized study budgets, track grant and industry payments and ensure regulatory compliance. Integrate EDC and EMR systems with Clinical Conductor to improve operations.

Improve Accuracy

Reduce Time Spent on Each Study

Increase Communication

Project Management - Utilize project management tools designed for research to track complex study progress across departments in real time. Set up configurable milestones for each study and site, and stay on schedule.

Partner Selection - Always select the right departments and locations for a study based on a variety of factors including experience, therapeutic areas, timeliness of reporting or payment, location and more.

Billing Compliance - Ensure billing compliance and manage finances from one centralized location. Track study payments, create multiple charge masters and manage industry and grant finances for oncology and more.

Regulatory Compliance - Stay in compliance with the Sunshine Act, NCI and other regulations, and always be able to pull necessary data and reports to easily send to regulatory bodies.

Document Management - With just a few clicks upload and store study documents that can be accessed in a moment's notice. Never worry about your trial documents, and dedicate more time to managing clinical research.

System Integration - Collaborate with your trial locations in real time through integrations or via partner portals. Integrate your EDC, EMR, and biospecimen software with Clinical Conductor.

Reports & Metrics - Have all of your trial data from all of your departments and complex studies automatically organized into clear, real-time reports that let you make more educated decisions that propel your business forward.

Study Enrollment - Use your integrated EMR technology to always know who is in your hospital and who qualifies for your studies. That way, you can fully enroll studies with the right patients more easily and in less time.
