

### **Be a pioneer of the future of racing with DroneGP 15 !**

Experience the first multi copter racing simulator and grow as a pilot of this completely new genre, mastering the controls and challenges that drone racing brings.

As in car or motorcycle racing sims, you'll have to be precise and concentrated to complete a lap successfully, learn to master curve lines and know your vehicle behaviour in every situation. But unlike car or motorcycle racing sims, you'll have an additional dimension to exploit and keep under control, making for a unique and totally new experience.

**Compete** against advanced AI players that adapt to tracks dynamically and control the same vehicle as you making every race different..

**Online** leaderboards and multiplayer races grant never ending challenges !

**The most advanced** and realistic multi copter physics simulation available, all vehicles have a “flight controller” on board exactly as real life ones, and while not yet user tuneable, pro pilots can expect much more in the coming months, and actually help us shape the future of DroneGP on our forums or via email.

Learning to master your vehicle won't be easy, but satisfaction is assured once you get hold of the controls and forces that move your race drone.

## What to expect

- Something new !
- 4 free race tracks
- 15 total race tracks (Single in-app purchase unlocks all current content)
- All tracks playable in multiplayer
- A true challenge
- Realistic FPV camera
- Rich and realistic audio design
- Great soundtrack
- Stunning graphics that push the limits of mobile devices
- The most realistic and advanced multi copter simulation available.
- Advanced user system allows for multiple users on the same device
- All progress synced with upcoming PC and Mac versions.
