

ABOUT ONPOINT SPORTS

More statistics, better analysis, faster updates and intuitive design make OnPoint Sports the most intelligent sports data application on the mobile market. By doing the heavy lifting of organizing and sorting through the data that's important to individual users, OnPoint's interface allows you to easily find the information that is relevant, keeping you in the game.

Users can subscribe to their favorite teams and players to receive push notifications within three to five seconds of an event taking place on the field. OnPoint Sports was founded by three graduates of the McMaster University Computer Science program who set out to create a solution to the multitude of unsatisfactory options in the sports data category.

FEATURES

- Over 1,000 statistics and data points
- Set alerts for games and scores
- Player pages with hundreds of statistics
- Live rosters
- Dynamically generate statistics comparison charts
- Twitter feeds showing what's trending for teams and players
- Live detailed play-by-play plus field animations
- Game-time statistics
- Live league standings
- Live game highlights
- Historical game, play-by-play, player, and team statistics dating back to 2012

THE TEAM

Elisha Ferrara, Chief Executive Officer

Elisha is a graduate of the Computer Science program at McMaster University. He has held software developer positions in semiconductors, aerospace/defense and automation.

Vitaliy Kondratiev, Chief Creative Officer

Vitaliy graduated from the Computer Science program at McMaster University. He has held software developer positions in semiconductors, utilities healthcare and education.

Tyler Lyn, Chief Technical Officer

Tyler is a graduate of the Computer Science program at McMaster University. He has held software developer positions in semiconductors, geomatics and utilities.

ORIGIN STORY

Elisha, Vitaliy and Tyler work from OnPoint HQ, the house they share in Waterloo, ON. Most hours of the day, the guys can be found tucked away in various corners of the house coding new features for OnPoint. The three met as students in the Computer Science program at McMaster University and became friends in their first year. In working on various projects together throughout their time in school, they realized that they made a great team.

After graduating and starting their programming careers, the guys eventually found themselves working together again in the field of semiconductors. The team came up with the idea for OnPoint after becoming frustrated with the surprisingly few options for advanced sports statistics contained in one place. Avid football fans, they were members in fantasy leagues looking for a way to easily analyze data for their drafts.

When there was nothing that met their needs, they knew that OnPoint would help not only themselves but the millions of other sports fans looking for the same thing. They quit their jobs and while working full-time on development, started a round in search of seed funding which they closed in 60 days.
