

C-30 Marblemaster Marble Seam Adhesive

*Better color
matches vs epoxy*

Chem-Set™ C-30 Marblemaster by Chemical Concepts is the result of 50+ years of hands-on experience and in-depth product knowledge; a welcomed addition to the innovative adhesive product line. It provides better cohesiveness than even the most well-known epoxy alternatives on the market, as well as convenient and effective application, great for joints and laminating.

We've developed Chem-Set™ C-30 Marblemaster to be the best adhesive on the market, it's Chem-set and match.

Here's why:

- > Low VOC, Air Quality Certified
- > Easy trimming features
- > Faster gel and cure time
- > Easy color matching
- > Makes quick work of fabrication projects
- > Contains supplements to create better bonds to marble, exceed that of competing products
- > Uses cartridges compatible with every major solid surface supplier
- > Made in the United States

“Ideal for fabricating countertops, bathroom vanities, and other marble surfaces, Chem-set C30 Marble Seam Adhesive produces tough, virtually invisible bonds on mitre joints, laminated edges and seams.

Available in a range of colors that are specifically blended to match many popular types of marble, including many shades of white that are often difficult to match using traditional products and techniques. Depending on the color, they cure to either an opaque or translucent finish.”

Of course, we also offer our very own line of world-class Chem-set™ products, including our very own famous C19 & NEW C20 seaming adhesives. Use our on-line **SEAMING ADHESIVE COLOR MATCH TOOL** to match ALL solid surface colors.
