

What is IMS Global ONEROSTER™ ?

one · ros · ter
/wən 'rəstər/

a technology standard developed by IMS Global Learning Consortium that replaces multiple/proprietary class roster templates with one common web service, agreed to by all members of the industry.

THE STANDARD DEFINES...

- ✓ Data fields, tables and relationships therein
- ✓ REST API's or CSV templates to be used to deliver data
- ✓ Secure authentication/security provisions regarding the REST API's

THE STANDARD IS...

- An open technology standard developed collaboratively by industry leaders
- An accepted set of CSV templates and REST APIs to deliver data
- Freely available for school districts and providers at oneroster.org
- Increasingly adopted by large and small publishers and platforms

THE STANDARD IS NOT...

- Tied to any one publisher or platform provider's methodology
- A "pay for access" model that requires publishers to pay license fees to data holders and then charge school districts to recover those same license fees
- An actual software application

Why we created ClassLink OneRoster

Challenges	Solution
Missing logins and incorrect class rosters are the first stumbling blocks and a key reason why online resources fail in the classroom.	With ClassLink OneRoster™, schools can eliminate these problems before they happen.
The burden of creating specifically formatted roster extracts for each provider falls on an already overburdened district IT staff, creating delays and jeopardizing accuracy.	ClassLink OneRoster™ helps solve this problem by providing an easy, secure and free approach to class roster delivery.
When students and teachers more actively use all their digital learning resources, they will want single sign-on.	ClassLink One-Click Single Sign-On offers instant access to any learning resource.

ClassLink is OneRoster Certified from IMS Global
