BPM-X solution for ARIS

More flexibility for enterprise analysis and modeling

Enterprise architecture (EA) and business process management (BPM) is a collaborative corporate effort and involves different types of users. Process owners, consultants or business analysts mostly favor easy-to-use tools for e.g. processes mapping for managing changes. Enterprise architects and process engineers may prefer more complex modeling suites like ARIS[®].

BPM-Xchange® is an enterprise integration, modeling and analysis suite which offers the accessibility and familiar comfort of Microsoft® Office Visio® aligned with strong methodical controls and modeling safety typically found only in much more costly tools. Apart from that, the BPM-X Designer seamlessly integrates with Microsoft[®] SharePoint[®] technology and offers an optional model repository and comes at a highly competitive price.

Flexibility and real openness make BPM-Xchange® an attractive choice for many enterprise management initiatives.

"How to have more acceptance and lower modeling costs?

Benefits of using BPM-Xchange® together with ARIS®

There are a number of good strategic and economic reasons to consider BPM-X Designer.

Strategic advantages

- Have satisfied users and simplify your project lifecycle.
- Enhance the acceptance for your initiative by including business users and process owners.
- Boost your productivity as a result of increased usability for process modelers.
- High level of conformity with respect to modeling standards (e.g. BPMN™, ARIS[®]

- method, VAC, EPC, FAD etc.).
- Support for Microsoft's cloud offerings (Azure™, Office 365™)

Economic profits

- Optimize your license fee structure and maintenance efforts by using enhanced Visio[®] for professional modeling and process mapping.
- Lower training and support costs.
- Optimize your TCO for ARIS®-based enterprise management landscapes.
- Attractive pricing even for small budgets.

You will learn how to

- Leverage your existing modeling landscape and investments in data while saving license and maintenance costs
- Use Visio[®] as a professional, ARIS[®]-compliant modeling tool
- Satisfy the needs of process owners, consultants, and analysts
- Build your own solution with a best-of-breed approach for a mixed environment using ARIS® together with Visio®

"The BPM-X solution significantly reduces your license and maintenance costs but also secures more buy-in from your business users compared to an ARIS®-only solution."

Use cases: The BPM-Xchange® -ARIS® solution

BPM-Xchange® allows you to build scalable EA and BPM solutions: starting with Visio[®] on a consultant's notebook up to a full-blown enterprise repository with governance workflows, versioning, and analysis tools.

Export the ARIS® database to Visio®

Often project deliverables have to be created in Microsoft® Visio® format. The data can be exported from ARIS® by simply using the standard ARIS® XML export which creates an ARIS® markup language XML file. BPM-Xchange® reads this file (and some configuration data describing the modeling conventions) and creates the Visio® files on-the-fly with the ARIS® look & feel and folder structures.

Migrate from legacy Visio® to ARIS®

BPM-X's strong conversion engine transforms any model formats like Visio® into the ARIS® format much better than native ARIS® does. While converting the data, the clever engine translates the ARIS® conventions into a Visio® stencil. The result is the harmonization of model data from different diagram types into ARIS® standards.

Employ Visio® as a smart front-end

When using the BPM-X Designer plug-in, Visio® is extended for full modeling support. It understands ARIS® object definitions, occurrences, all data attributes, model assignments and drilldowns, multiple content languages, method language, model types like BPMN 2.0, and any kind of ARIS® model types including swim lane-based ones. BPM-X pushes Visio® to the level of a professional modeling tool without changing the spirit of Visio[®].

Process bi-directional integration

With BPM-X's powerful integration capabilities, Visio® can be seamlessly linked with ARIS®. Data is mirrored from ARIS® to Visio® and back.

Publishing ARIS® data to open formats

It is convenient to use BPM-X for the publishing of ARIS® data with HTML, SharePoint® or web-based reporting.

Replace ARIS® by the BPM-X solution

ARIS® is fully replaced by using the BPM-Xchange[®] enterprise repository based on SharePoint® and Microsoft® SQL Server[®].

Products used to build solutions

BPM-X delivers turnkey solutions for quick deployment in the client's tool landscape off of the shelf; it optimizes business value with low project risk and TCO. Manifold solution scenarios can flexibly be built with BPM-X software components:

- BPM-X Designer for professional modeling compatible with ARIS® formats, standards, and conventions.
- BPM-X Converter as software bridge to build migration and integration scenarios with ARIS® and Microsoft® tools.
- BPM-X Browser for publishing model data to intranets using plain HTML or optionally SharePoint® document libraries.
- BPM-X Administrator to manage modeling conventions such as ARIS® filters, based on our open meta-model.
- BPM-X Reporting Services for web-based and office integrated, professional enterprise reporting of model data.
- BPM-X Repository based on SharePoint® and MS SQL for optionally setting up a professional enterprise repository.

Technology

BPM-X Designer supports® Visio® 2010, 2013 running on Microsoft® Windows® 7, 8. As back-end software SharePoint® 2010, 2013, MS SQL 2008, 2012 and Windows® 2008 R2, 2012 Server are supported.

License model

For every Visio® user a named BPM-X Designer license is needed. Other products have specific license models.
