

mFinity EMMP

Enterprise Mobility Management Platform

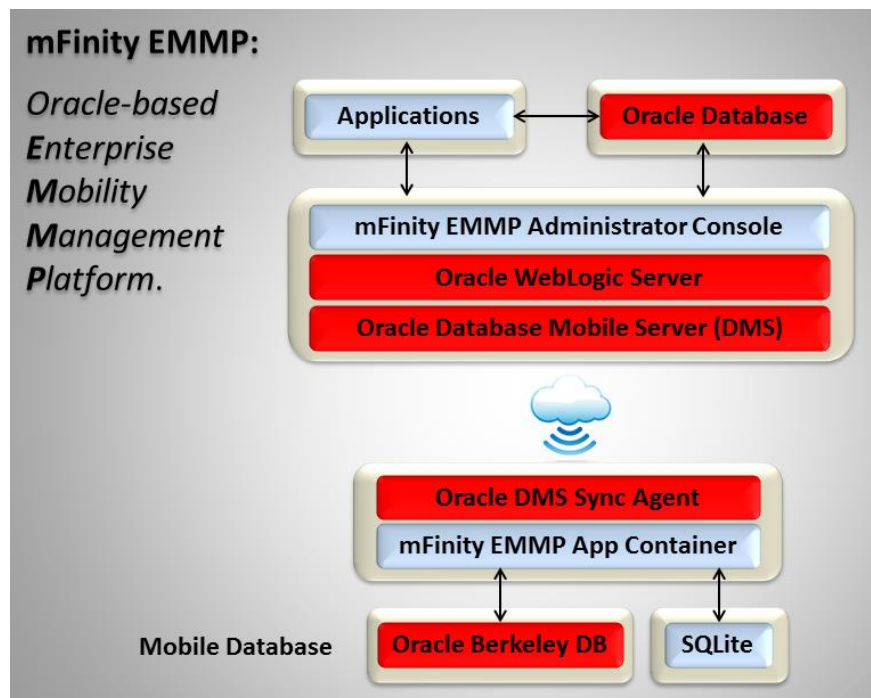

mFinity® EMMP is an Oracle-based enterprise mobility management platform, available both in the Oracle Cloud and for on-premises implementation, that provides mobile device and mobile application management, and a framework for the development of single source code applications that run on all Android and iOS smart phones and tablets.

mFinity EMMP provides role-based app deployment, which eliminates the need for users to download apps and updates from an app catalog and ensures that apps are always up to date.

mFinity EMMP provides a single sign-on, multifunction app container that facilitates:

- Full access to native device functionality, such as camera, sound, GPS, and local data.
- Simplified database mapping between the cloud and mobile device.
- Database-level synchronization of cloud and mobile databases.
- Additional security through the delivery of time-sensitive one-time passwords.

This unique combination of features allows mFinity EMMP to provide significant productivity advantages for developers, administrators, and end users.
