# *m*Finity IoT

Connecting People, Devices, and Data

mFinity IoT is an Oracle-based platform for monitoring, control, and data collection for the Internet of Things. Running either in the Oracle Cloud or on-premises, **mFinity IoT** delivers security, availability, performance, and scalability for the most demanding IoT applications.

ORACLE®
CLOUD

mFinity IoT has three major components.

- The **mFinity IoT Server** runs in the Oracle Cloud and benefits from its performance, reliability, security, and scalability.

- Device connectivity is provided through the **mFinity IoT Agent**, which is implemented using the **mFinity IoT** SDK to embed application code in IoT devices, providing improved security and other functionality.

- The **mFinity Mobile Agent** runs on mobile devices to provide secure access to IoT data in the Cloud.
