Cisco Prime Infrastructure 2.2
Webinar

CISCO

Overview

IT professionals need a comprehensive solution that enables them to manage the network from a single graphical interface. That solution is Cisco Prime Infrastructure. It provides lifecycle management and network service assurance network wide, from the wireless user in the branch office, across the WAN, through the access layer, and now to the data center.

With Cisco Prime Infrastructure, you can speed the deployment of network devices and services. You can find problems sooner and troubleshoot them faster. You can help employees work their own way on their own devices, at any time, and work better with each other, from anywhere. Cisco Prime Infrastructure lets you manage your network more efficiently and effectively so you can achieve the highest levels of wireless and wired network performance, service assurance, and end-user experience.

Dan Stanton has been a Cisco Certified Systems Instructor for over 20 years. He has also developed many courses for Cisco including WMUAPI 2.2 which covers the latest version of Cisco Prime Infrastructure. He will be presenting this seminar so you don't want to miss this opportunity. He will be discussing Cisco Prime Infrastructure 2.2 and demonstrating its capabilities with a live demonstration of the product.
