quicklaunch™

Quicklaunch™ is an easy-to-use **One-Click/One-Touch** meeting management add-on for **Microsoft Skype for Business** and **Lync Workspaces**.

Welcome to *Better Meetings*.

Welcome to **Quicklaunch**™

Quicklaunch™ is an easy to use, 'one-click'/'one-touch' application to join meetings, start applications, access data, play media, showcase your organization's content and business intelligence assets, and more. It's everything you need for better meetings in one application.

Quicklaunch™ is customizable and is designed to work with your existing equipment or our custom Workspace Solutions. All you need is a camera, PC, and display to get started. Quicklaunch™ integrates with your existing Microsoft Exchange, Skype for Business, and Lync environments to extend your enterprise experience.

Quicklaunch™ was built with security in mind. Unlike other meeting room applications that can unknowingly leave behind temporary files containing sensitive data, Quicklaunch™ keeps your confidential data secure with the 'Room Reset' feature that restores meeting room devices to a clean state and deletes all sensitive data before the next group meets. Quicklaunch™ also has an optional 'Kiosk' mode to lock-down your Quicklaunch device and protect it against unwanted changes.

With Quicklaunch™, your meeting space is always ready to join or create new meetings with a simple touch. Quicklaunch™ is more than just a one-touch meeting join system. It seamlessly brings multiple technologies together into a single application, enabling collaboration rather than complicating it.

Extended Enterprise One-Touch Experience

Easy–Interactive–Touch–Pen–Intelligent

Quicklaunch™ was designed for organizations that are looking to provide an intuitive, rich collaborative experience across a spectrum of devices and locations. Quicklaunch™ is available across our portfolio of Workspace Solutions.
