Starborn Introduces a New Two-inch Version of its Cap-Tor® xd PVC and Composite Deck Screw

New Shorter Cap-Tor xd Screw is Designed for use in Rooftop Deck and Sleeper System Applications.

EDISON, New Jersey (November 12th, 2015) – Starborn Industries, Inc. (www.starbornindustries.com), a leading fastener manufacturer and distributor, has introduced a new two-inch version of the Cap-Tor® xd PVC and Composite deck screw. This new shorter version of the Cap-Tor xd screw is designed to attach PVC and composite decking to rooftop sleeper systems or for use in other applications where standard 2-1/2" or 2-3/4" Cap-Tor xd screws are too long. The two-inch version is available with an epoxy-based polymer resin coating in colors to match most popular decking products.

"We've seen a growing demand for rooftop decks in urban areas throughout the U.S.," said Starborn's Larry Crossley. "The new two-inch Cap-Tor xd screw is a direct response to this trend, and adds to our growing line of face- and plug-fastening options for rooftop decks."

Cap-Tor xd is a part of the comprehensive Deckfast® line of deck fastening products offered by Starborn Industries. For a complete guide to picking the right deck fastener, visit www.starbornindustries.com.
