PRESS RELEASE

Subject: The First NDC Platform Receives NDC Level 3 Certification from IATA

Ref: MU_NDC1/01_16

JR Technologies (JRT) is pleased to announce that it has been awarded the IATA level 3 certification as NDC-Capable for the IATA NDC schemas version 15.2.

Level 3 certification covers end-to-end transactions including offer management and order management. The certification services offered by IATA, validate that NDC messages are developed according to industry standards.

The JR Technologies NDC Platform that served as basis for this certification is the first NDC Order Management System in the world to receive such a certification. It demonstrates JR Technologies' capability to quickly adapt to new technologies and enable its clients to be in step with their markets.

The JR Technologies NDC platform includes an Offer Management System (OfMS), a rich Content Management and Merchandising System (CMS), an Order Management System (OrMS), a Passenger Identification Management System (PIM) and the necessary software to integrate into the airline's existing systems. This NDC platform comes with a set of aggregation tools and solutions, including a travel agency portal and a corporate booking tool.

JR Technologies is an IT solutions provider specialized in travel distribution technology. It was established in 2002 introducing new innovative solutions supporting travel agency and airline initiatives in modernizing their distribution models. JR Technologies became an IATA Strategic Partner in 2013 to help transform the current airline distribution landscape. JR Technologies is 200 employees strong. It operates its software development and R&D centers in the USA, Greece, and India bringing together a team of innovators and visionaries whose goal is to constantly challenge the status quo in order to enable the leaders of this new era in airline distribution to deliver their ideas and strategies to the market place.
