

# QUIK-SHIELD 108

The **ONLY** Ultra-Low Density Spray Foam

## ULTRA-LOW DENSITY

0.4lb/ft<sup>3</sup> Nominal Density • Industry-Leading Yield

Quik-Shield 108 is the **ONLY** spray foam on the market that can achieve an Ultra-Low Density of 0.4 lb/ft<sup>3</sup>. No one else is even close. The only product feature that translates directly to yield is the density of the foam. This means our 0.4lb spray foam will yield 25% more than the 0.5lb density foam you're currently spraying. Quik-Shield 108, with its Ultra-Low Density, makes you more competitive and helps win more bids.

**25% MORE  
YIELD THAN  
YOUR CURRENT  
0.5 OPEN-CELL  
FOAM**

## REVOLUTIONARY EXPANSION

Fewer touch-ups • Easier to train new sprayers • Void free • Expands evenly & predictably

You've never seen foam do anything like this before. The accelerated expansion of Quik-Shield 108 gives you dramatic, 360° cavity fill with heavy-duty adhesion. This gives you the ability to fill an entire wall cavity with a single zipping motion. By reducing the time consuming process of traditional spray techniques and void touch-ups, you'll increase job efficiency by up to 20%. Fewer touch-ups make Quik-Shield 108 the easiest product to train new sprayers, plus it significantly reduces applicator fatigue. It's a no-brainer.

## LONG-RANGE APPLICATION

Eliminate the use of scaffolding and ladders • Safer jobsites • Increased Productivity

Have you ever successfully sprayed an 8 inch lift on a roof deck from 15 feet away? No one has. There wasn't a product capable of it, until now! Quik-Shield 108 can be applied in a single pass without the foam dripping or falling off the deck, while maintaining its Ultra-Low Density. This allows you to eliminate the use of ladders and scaffolding in some areas, creating a safer jobsite and speeding up the time to job completion. Not only is this product perfect for high pitched roofs and other hard to reach areas, it will transform the way you stage and complete your entire job.

*Spray roof decks with 8" lifts from 15' away. Foam will not drip or fall out of the cavity.*

## BREAKTHROUGH TECHNOLOGY

Starting with our novel approach to open-cell chemistry, we've re-engineered the building blocks of foam with our breakthrough technology. Our unique formulation not only looks different, it performs like nothing you've ever seen before. Revolutionary Expansion and Ultra-Low Density make Quik-Shield 108 the foam that every applicator loves.
