metaviewer
Paperless ERP for NetSuite

The MetaViewer document management solution from Metafile offers paperless capture of and access to invoices, purchase orders, and other documents. It supports organizations' AP and AR departments by automating workflow, and boosting transparency and accountability, which leads to reduced costs, improved customer service, and increased vendor satisfaction. Paper and electronic invoice capture, web-based workflow, real-time visibility, two- and three-way matching, and full ERP integration make MetaViewer a complete AP automation solution.

MetaViewer works with NetSuite by capturing all AP and AP-related documents electronically, which allows for seamless access to all document images directly from NetSuite screens. Document images automatically attach to NetSuite transactions with a simple URL link.

More than 15,000 financial professionals worldwide are efficiently processing more than 15,000,000 paperless transactions per week with the MetaViewer Paperless AP,

Paperless AR, and Paperless HR solutions. We work with mid-sized and enterprise level companies, with between 50 and 500 employees, that process a high volume of documents and seek to make their business more efficient by using document automation tools with NetSuite.

MetaViewer is available as an on-site solution or as a cloud-based subscription service. The Fast Track option enables you to quickly implement, within 30 to 90 days, a fully integrated solution, which includes an estimate of services needed to spin up the software, integrate with your NetSuite environment, onboard your users, perform training, and provide go-live assistance. Solutions start at $3,000 per month for the hosted option and $25,000 for a perpetual license; both require an additional $25,000 estimate for implementation services. We are "Built for NetSuite" verified. To learn more, please contact a Metafile representative.
