

PREMEDEX to spotlight Chronic Care Management at HIMSS 2016

Numerous physician practices select leading CCM solution to better manage patient interactions

February 25, 2016 – Atlanta, Georgia – PREMEDEX will be featuring its leading Chronic Care Management (CCM) solutions as part of the Metro Atlanta Chamber pavilion at HIMSS 2016, at Booth #2065. PREMEDEX CCM solutions are being quickly adopted by physician practices of all sizes throughout the United States, to help these practices better monitor patient health for those designated as having a chronic condition.

Recognized as a market leader in addressing needs for enhanced patient care management, PREMEDEX solutions are now deployed at both physician practices and well-known hospitals throughout the nation. PREMEDEX solutions also serve emerging Accountable Care Organizations.

PREMEDEX has managed over 1.2 million patients in conjunction with providers across the country to ensure that patient needs are addressed in a timely manner. With timely follow-up and direct interaction, PREMEDEX also alerts physicians and client hospitals of potential patient medical issues, which in many cases can be addressed prior to being escalated to emergency treatment or hospital admission.

“Over the past three years, we have made tremendous progress in helping our partners improve their operating performance. More importantly, the PREMEDEX team remains focused on improving the quality of patient care and follow-up, as a routine part of our CCM program, or as they transition from a hospital environment back to their home. Knowing that you’ve helped an individual feel more confident and assured is the biggest reward for our entire team,” remarked Van Willis, President and Founder of PREMEDEX.

About PREMEDEX

PREMEDEX provides a technology enabled service platform via a cloud-based subscription model. The PREMEDEX platform and staff of healthcare coordinators streamline the communication process with patients and enable providers to capitalize on chronic care management, capture transitional care management revenue, reduce avoidable readmission, and improve patient outcomes.

PREMEDEX Results
