SH-Series Robotic & Automation Torque Control System

The SH-Series is a durable torque and automation control system engineered for precision accuracy and repeatable torque control. The high performance robotic fastening system by Mountz allows manufacturers to optimize the assembly area, reduce labor costs and increase productivity.

The SH-Series delivers cost savings and quality benefit through useful features such as digital adjustable torque setting, variable torque and speed control, multiple I/O options for integration with PLC and other line control techniques. A Windows based software package that can customize each fastening applications is included with the product. The torque control system features built-in error proofing data and screw counter. Multiple fastening strategies can be implemented for sensitive or of difficult assembly joints. The SH-Series tool increases productivity as one tool can be programmed to do the job of multiple conventional tools, saving time, maintenance cost, space and training.

The SH-Series features a programmable digital torque setting with memory for 8 preset torque settings. The robotic screwdrivers are built with an AC servo motor system. The torque is controlled by the motor's current, which provides precision torque control. Built for both critical low and high torque fastening applications, Mountz offers various automation models that range from 0.43 - 564.2 inch-pounds. The controller of the SH-Series includes a built-in screw counter, which prevents screw-fastening errors and detects cross threading, omissions, unfinished rundowns and cycle incompletes.

RoHS

The goal of the screw counting process is to ensure that all fasteners are accounted for during the assembly process. Further a fastening error is identified on the assembly line, the more it costs in rework time and expenses. If a fastening error is committed and detected during the assembly process, the operator can correct it or prevent the faulty product from moving along the manufacturing line or being shipped out to a customer. Making a safer world through accuracy and precision is the core purpose of Mountz, Inc.

The Mountz automation tool systems improve productivity and efficiency with six key essential manufacturing benefits:

- 1. Reduces the production cycle.
- 2. Production flexibility and rapid reconfiguration for new production projects.
- 3. Provides a consistent repeatable process control and eliminates potential variations.
- 4. Integration control and data exchange.
- 5. Optimum asset utilization. Tooling expense delivers favorable return of investment.
- 6. Maintenance and repair are easy and low cost.

Electric Screwdrivers (AC servo motor)

- Various models that range from 0.43 564.2 lbf.in
- Current controller servo motor features precision accuracy and repeatability performance. Low maintenance with an extended life cycle.
- Low inertial force provides smooth reaction-less operation with little G force to assembled parts.
- Low noise, vibration and maintenance.

Built-in Screw Counter

- Detection of fastening error and displays error condition.
- Visual assembly fastener count (count up or down), including total count.
- Real time monitoring by PC program.
- Detects cross threading, omissions, unfinished rundowns and cycle complete.
- Programmable screw counter settings.
- 0 to 99 screws.

Controller Panel Display Programmable digital torque setting with memory for 8 Shows the status with 6-digit 7-segment LED display preset torque settings. Sequence setting (Preset #). Real-time monitoring and torque control of the tightening process. Fastening torque. Real time torque data and curve display Fastening process status. Min & Max Angle (OK/NG). (Torque vs Time, Torque vs Speed, Torque vs Angle). Min and Max Angle setting. Real time fastening data output (RS-232C). -Torque unit setting. Selectable speed settings. Preset torque setting. Programming and monitoring with Smart-Manager (PC software). Preset speed and actual RPM. Programmable multi-sequence operation. Turns and fastening time. Displays error information by code. Controller warning and alarm system. Signals the status of the controller. Maintenance information and history memory. Firmware upgrade by Com port. Preset Parameter Settings Screw Counting Selections Five selectable units of torque measurements: - Auto ozf.in, lbf.in, cN.m, N.m, Kgf.cm. Start (Continuous on) Selectable settings for Torque, Speed, Min & Max Angle, and Soft Start time. Start Pulse with time limit Maximum angle control and verification. Start Pulse and Finish pulse Minimum angle control and error reporting. I/O Interface & Settings Motor Run Time Limits - Motor run time limits, forward and reverse. 50P I/O interface to a PLC or 8 direct sensor ports. Sensor ports for preset selection and screw counting. Motor stall time limit. Input via sensor ports for presets. Sleep time. Input / Output for PLC. Motor acceleration for soft start.

Output Signal Types

- Count complete
- Torque up and Count complete
- Alarm, screw missing

Brushless Robotic Electric Screwdrivers

Notel: * These models (VC) are equipped with vacuum attachment adapter and a bit cushion.

SH driver mounted to an automation system.

A robotic screw presenter used in conjunction with SH robotic torque control system.

Controllers

Model: SHC-50 Controller Item # 145938 For driver models: SH030R- SH050R Model: SHC-100 Controller Item # 145937 For driver models: SH100R

Model: SHC-800 Controller Item # 145952 For driver models: SH800R

Model: SHC-400 Controller Item # 145951 For driver models: SH400R

Specifications

- Input (Electric): AC220V Single Phase, 50~60Hz (for Controllers SHC-50, SHC-100 & SHC-400) AC220V Three Phase, 50~60Hz (for Controller SHC-800)
- Mountable
- Preset selection capability: Front panel or 50P I/O
- Angle Control: 0.1 10 turns
- Preset Parameters: Torque, Speed, Soft Start & Angle in 8 preset numbers
- Auto detection of the connected driver: Auto detection of the offset value from the EEProm on the driver
- Error display: Error display by code no. in system, communication & pattern error group
- Fastening Quality Control: OK/NG monitoring of screw fastening by preset pattern of angle and/or time.
- PC based program for parameter settings, monitoring and real time output.
