

## CONQUEROR – CNG DAUGHTER STATIONS

Ultra fast and profitable CNG infrastructure deployment for locations where gas pipelines are not available.

The CNG Source solutions allowing quick deployment of safe and reliable infrastructure enabling businesses to operate in geographical areas out of reach for the typical pipeline-dependent solutions.

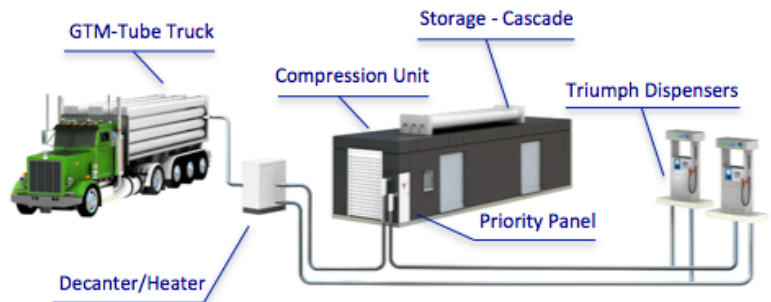

### LIMITLESS

#### CONQUEROR by CNG Source

When running a CONQUEROR unit, expanding the operation becomes as simple as playing with building blocks.

Adding a slave unit allows to grow and double the output capacity while sharing several key components from the master unit such as, the priority panel, the storage/cascade banks, the communication panel for the remote monitoring and control and even the decanting/heating unit.

We manufacture most of the intelligent components like the priority panels, dispensers, control panels, including the software governing the machines, this ensures a seamless communication between the components. The result is a highly performing and dependable equipment providing an optimal cost of operation and giving you the highest uptime in the market.

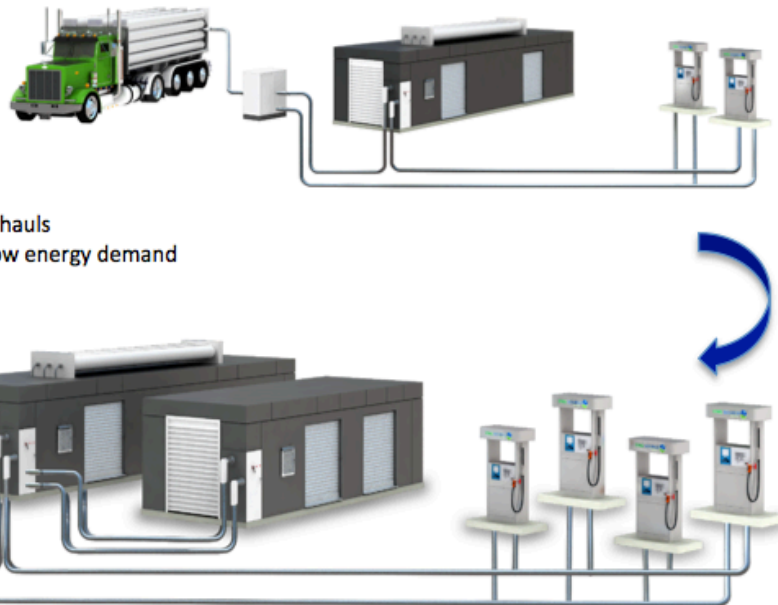

## This innovative solution harnesses the latest technologies to facilitate the CNG infrastructure deployment in locations where gas pipelines are not available.

The CONQUEROR family boasts a number of key advantages including modular design ready for expansion with master/slave configurations and integrated programmable priority panels.

### FEATURES

- Compact and Modular for easy expansion
- Plug n Go—Installs in just a few hours
- Feeds from gas-modules, storage and compressor
- ESD present at each module
- Remote monitoring and control
- Dispensers with card capability\*
- Upgradable to dual compressor with the master kit
- Low maintenance – 16,000 hrs. interval between overhauls
- Optimal configuration producing high pressure with low energy demand

### OPTIONS

- Gas engine drive. Fully autonomous, optimal operation cost.
- Double filter kit. For those situations where the gas source requires extra filtering
- Credit cards and fleet management cards. On pedestal or integrated in the dispenser
- Communications package & remote monitoring/control. Management from anywhere in the world at any time.

The CONQUEROR units are paired with the state of the art TRIUMPH dispensers allowing for a superior user experience.

MODEL	Pipeline Ready	Double Filtering Pack	Remote Monitoring & Control	Cards Credits & Fleet	Decanter	Priority Panel	Storage	Dispensers	M3/h
Conqueror 1 e	Y	O	O	O	Y	Y	N	1	885 m3/hr
Conqueror 2 e	Y	O	O	O	Y	Y	Rack T1	2	885 m3/hr
