

iBwave Mobile Suite and Anite Nemo Tools Working Together to Simplify Site Surveys

Montreal QC, August 31st 2016- iBwave Mobile Planner and iBwave Mobile Note now feature even tighter integration with the Anite Nemo Android solutions from the simplest apps to the most complex software: Nemo IBC Meter, Nemo Handy and Nemo Walker Air. Building upon their existing collaboration, both sets of tools are fully compatible with each other to offer field professionals a unified and streamlined user experience.

“We are excited to strengthen our collaboration with iBwave.” says Kai Ojala, CTO and Vice President at Anite Network Testing, and continues:

“With iBwave being very strong in the planning phase, our integration with their product suite brings tremendous advantages in the implementation of in-building wireless networks. Using iBwave and Anite Nemo solutions, our customers can truly streamline OPEX and accelerate DAS and small cell deployments.”

With the advent of HetNet technologies, in-building projects have become more complex to involve simultaneous planning for multiple technologies. Because of this trend, planning accuracy is now more critical, since the cost of inaccurate designs can be staggering. The integration of iBwave Mobile and Anite Nemo makes it possible for operators and service providers to reduce their operational expenses (OPEX) and realize up to 60-70% time savings through planning based on accurate measurements.

“iBwave Mobile aims to eliminate time consuming tasks associated with site surveys and post-survey processing. With each new release and enhancement, we reduce the guesswork in RF data collection and network design” said Benoit Fleury, VP of Product Line Management at iBwave. He added “we are excited to strengthen our collaboration with Anite by offering a tighter integration with the Nemo suite. This is a continuation of our strategy to offer the most complete solution for wireless in-building deployments from design and prediction to data collection and documentation”.

The seamless integration with third-party collection tools makes iBwave’s Mobile portfolio indispensable for site surveys, field-based designs and as-built-documentation - all in an iBwave compatible file which is the established standard worldwide. ABOUT iBwave

iBwave is the power behind great in-building wireless experience, enabling billions of end users and devices to connect inside a wide range of venues. As the global industry reference, our software solutions allow for smarter planning, design and deployment of any project regardless of size, complexity or technology. Along with innovative software, we are recognized for world-class support in 90 countries, industry's most comprehensive components database and a well-established certification program. For more information visit: www.ibwave.com

About Anite

Anite is a leading supplier of test and measurement solutions to the international wireless market. It provides testing, measurement, optimization and analytics systems based on its specialist sector knowledge and its proprietary software and hardware products. Customers include major manufacturers of mobile devices, chipsets and network equipment, mobile network operators, regulatory authorities, and independent test houses.

Anite's Network Testing business provides cutting-edge network measurement systems and solutions globally under the Nemo brand to a wide range of customers including mobile operators, network equipment manufacturers, service contractors and regulatory bodies in Europe, the Americas, Asia and the Middle East.

Anite is now part of Keysight Technologies. For more information, please visit the company's website: www.anite.com
