## INTRODUCING THE NEXT GENERATION OF THE SUPERIOR STEAM EXPERIENCE

### Performance Features of Amerrec AX Generators

- Sequential Temperature Control delivers a more consistent flow of Soft Steam and a more stable, comfortable steam bath experience.
- 3 sizes handle a range of steam bath sizes up to 550 cubic feet.
- AX generators can be connected together to heat steam baths larger than 550 cubic feet.
- Intelligent start preheats baths to be ready when needed.
- Warm Start, a feature used in Day Spas and for use with A6 control only, maintains a tank water temperature at just below boiling, which reduces heating time by 2-3 minutes. Warm Start cables must be ordered separately.
- Exterior plug-in jacks allow quick and easy connection of control and sensor cables.
- 240 and 208 volt models can be wired in the field for 1 or 3 phase power.
- Stainless steel tank and water level probes provide years of trouble-free operation.
- Removable heating elements provide easy and economical service.

#### How to select the proper AX generator kW size:

- Step 1** Calculate the cubic footage of the steam room by multiplying Length x width x height = cubic feet. (Maximum recommended ceiling height is 8')
- Step 2** If wall and ceiling surface material is natural stone (marble, granite, slate, travertine, porcelain tile, etc.) multiply cubic footage in Step 1 by 1.75 = cubic feet.
- Step 3** Select the appropriate kW size generator based on cubic footage range below.

Model	kW	Cubic Footage Min - Max	Volts	Item No.	List Price
AX7.5	7.5	80 - 200	240	9016-400	\$ 2,400

To calculate the generator size required, multiply the length x width x height of the steam room.

For rooms made of natural stone, multiply the cubic volume by 1.75 (stone requires more power to heat)

(Maximum recommended ceiling height is 8 feet.)

For rooms exceeding 550 cubic feet, generators may be ganged together to achieve required capacity.

Each generator will require its own power source as described in the chart above.

**Example:** Room size 750 cu ft, power available 240V 1 phase:

Use two AX11 generators.

Requires one 60A circuit for each AX11 steamer (total of two circuits)

**Example:** Room size 925 cu ft power available 240V 1 phase:

Use one AX11 ( requires one 60A circuit) plus one AX14 (requires 2

circuits, one 30A + one 50A)

One control required, regardless of quantity of generators. Additional controls may be connected

AX steamers are compatible with Amerec's A6 control or A3 digital control.
