Drive Situational Awareness through Mobile Visibility

Apptricity Supply Chain Management is an advanced mobile solution suite that automates supply chain operations. With unprecedented insight, visibility and control, you can now effectively manage complex supply chain operations that include asset tracking, inventory management, order fulfillment, warehouse management, supplier integration and more.

All Apptricity solutions utilize a common service-oriented architecture (SOA) platform, enabling you to select the individual modules you need for end-to-end supply chain automation. You can also add solutions from the Apptricity Spend Management solution suite to tie together additional corporate functions and automate your entire enterprise.

Our innovative platform is uniquely designed to handle far-reaching supply chain automation projects that require integration with dozens of other systems. The Apptricity integration engine connects directly to your existing systems, providing a robust cross-functional solution and maximizing the value of corporate resources.

With a flexible business rules engine and the ability to customize all fields, screens and menus, Apptricity Supply Chain Management addresses the needs of organizations of any size. Available separately or within an integrated system, the solutions can be deployed in your data center or in the cloud.

Apptricity Asset

Apptricity Asset supplies comprehensive enterprise-wide tracking, maintenance and valuation for all assets. Critical data for making solid purchasing, scheduling, useful-life and salvaging decisions is at your fingertips. Our solution manages the entire asset lifecycle, which includes monitoring unused and assigned equipment. The system also tracks service contracts and maintenance schedules to lower the total cost of ownership by eliminating manual processes. Depreciation models are simplified through the system's valuation capabilities.

The solution utilizes global positioning system (GPS) technology as well as radio frequency identification (RFID) tags and/or barcodes for enhanced tracking and location verification. Location history and complete chain-of-custody records are maintained for every asset. You can accurately account for all assets across each facility and gain immediate access to the procurement-to-retirement lifecycle using real-time data available through any Web browser and virtually any mobile device. Assets scanned via Wi-Fi or cellular are immediately synchronized with Asset. In areas without communication access, users can scan assets and automatically sync the data once a network becomes available.

Apptricity Work Order

Apptricity Work Order gives you start-to-finish control of the work order process by tracking all details pertaining to requested services. From creating and assigning requests to prioritizing work orders according to predefined specifications, our solution provides all the necessary tools to keep employees organized and management informed. The system supports configuration according to your business rules. You can include budgeted hours or costs — including markups — with each work order to keep services within budget and maintain profit margin.

Jobs are executed with efficiency, in the correct order and according to need. Drag-and-drop functionality allows you to quickly assign new work orders to a specific date and/or employee. Technicians can perform their tasks by using the system on a mobile device, even capturing approval signatures digitally. This vastly improves efficiencies while promoting a paper-free process and supporting green initiatives. Our solution makes it easy to enforce employee accountability, ensure timely responses and safeguard work quality, all while contributing to the bottom line.

Apptricity Inventory

Apptricity Inventory forms the foundation for all inventory control processes within the Apptricity Supply Chain Management solution suite. Configurable for remote, depot or other more fluid distribution environments, *Inventory* gives you the ability to manage inventory across multiple sites in your supply chain without having to invest in the infrastructure, people, equipment and processes required for a traditional, full-scale warehouse operation.

Using a Web browser or virtually any mobile device, personnel can oversee inventory levels, trends, locations and more, supported by a user-friendly interface and efficient reporting functions. Users can also perform inventory control processes such as movements, adjustments and receiving and gain real-time visibility across multiple facilities. In addition, the streamlined nature of the system affords a dramatically reduced implementation timeframe, giving you the benefit of a rapid return on investment (ROI).

Apptricity Warehouse

Apptricity Warehouse applies cutting-edge technology to the age-old struggle of efficiently managing both your warehouse processes and inventory from end to end. The solution enables you to manage your entire operation — from inbound shipments to inventory control as well as picking and shipping — all with the click of a mouse or touch of a screen via an intuitive, user-friendly interface. Specialized tools help minimize lost revenue from stock-outs, spoilage and shrinkage.

The system directs tasks within your operation, reducing the need for employee training and improving support for seasonal workers. Warehouse efficiencies are multiplied due to the ability to optimize pick locations based on usage frequency to accelerate the picking and shipping of products. The solution can be configured to support returns for replacement or repair, enabling recalibration and servicing operations. Integrated yard management capabilities give you visibility into the exact age and location of your trailers and how long each dock door has been occupied. Alerts can be set to warn managers when thresholds are exceeded.

About Apptricity

Apptricity Corporation provides mission-critical supply chain management and spend management solutions to small, midsize and global enterprises and government organizations worldwide. Apptricity software and solutions mobilize any enterprise with unprecedented levels of real-time information and business intelligence so management has visibility into every action and transaction within the enterprise and among its partners, customers and suppliers. Powered by Apptricity JetStream platform, our solutions enhance legacy enterprise applications and extend the value of information technology investments. Our platform enables us to address the universal objectives of business, government and the military with accelerated business processes and command visibility.

Apptricity Field Services

Apptricity Field Services combines multiple Apptricity Supply Chain Management solutions — including *Asset*, *Inventory*, *Work Order* and more — to extend them into the field. Accessible on virtually any mobile device, *Field Services* makes real-time information available to the dispatcher, the field service technician or engineer, and upper management.

GPS technology as well as RFID tags and/or barcodes provide enhanced tracking and location verification. You never lose track of inventory as it is stored, loaded on vehicles, used or delivered. The solution significantly reduces excessive service calls, optimizes driving routes and ensures that “lost” tools and equipment are no longer an issue. *Field Services* can also track labor hours for each task for billing and analytical reporting. The system’s advanced capabilities make your field operations measurably more effective, efficient and profitable.

Tracking, monitoring and management capabilities also extend to every aspect of your fleet assets. Precise analytics on fleet utilization and performance help improve equipment availability, reliability and longevity. Built-in reporting features provide insight into your operations and related expenses. In addition, *Field Services* vastly improves your visibility by closely monitoring fleet maintenance and repair operations, staff assignments, outsourced work, and more. Fleet personnel across your enterprise receive the tools and data to efficiently manage daily maintenance activities in light of the long-term strategic goals of your organization.

Bringing the Mobile Enterprise to Supply Chain Management

A leading provider of innovative mobile enterprise software worldwide, Apptricity combines a state-of-the-art user experience, forward-thinking designs and innovative technologies. We use our extensive experience in the enterprise-wide integration of multiple systems to integrate new applications and open systems with existing technology investments. Our supply chain subject matter expertise enables us to deliver comprehensive, modular solutions that solve complex business problems and multiply your efficiencies, moving your business ahead of the competition.
