

FOR IMMEDIATE RELEASE

WELCOME A NEW AND IMPROVED FREECURVE STAIRLIFT

Tighter bends create safer parking positions and more space on the stairs

Allentown, PA (November 18, 2016) – The reliable Handicare Freecurve stairlift system has been improved once more. Due to developments in the unit and rail production, the stairlift can now turn tighter corners and runs even closer to the stairs, offering safer parking positions and more space on the stairs for other users in the home.

With tighter parking bends, the improved Freecurve stairlift offers users safer parking positions at both the top and bottom landings while keeping rail intrusion to a minimum. The free space created as a result, both on and around the staircase, makes the stairs safer to use for other members of the household.

“The curve radius of our Freecurve has been improved which leads to more safety and comfort for our users,” expresses Dick Beerepoot, the Product Manager for Freecurve. “With the tighter curve radius, the track intrusion upstairs and downstairs is minimized, allowing the installation of tighter parking curves. The field test has proven that the Freecurve Rembrandt can now be sold with very tight 180° parking bends at the top landing. A great improvement!”

The improved design also increases the fit of the Freecurve stairlift on inner and outer curves. Handicare makes the on-site assessment easy for its qualified dealers easy by providing a QuickScan app. From a smartphone or tablet, dealers can advise their customers in a few simple steps which side the stairlift can be mounted based on its curve.

In multiple floor situations, the intermediate landing can be used as a safe parking spot because the rail runs lower over the landing while offering more bulkhead clearance.

About Handicare

Handicare is a global leader committed to providing innovative products that promote independence. Handicare offers a wide variety of straight and curved stairlifts to fit the many needs of users looking for a safe and reliable way of overcoming the problem of getting up and down the stairs.
