CENTRO
CLINICAL DOCUMENTATION SYSTEM

Centro is Crescendo's all-encompassing charting workspace that provides users facility-wide with a method to create and manage their documents in the most advanced way possible.

TOUCH-ENABLED FORMS. Centro electronically replicates traditional forms to allow nurses to continue working the way in which they are accustomed while ensuring consistency throughout the medical report. Touch enabled assessment forms allow nurses to quickly evaluate a patient.

NURSE'S NOTES. The Centro system allows nurses to ensure the consultant is informed of the patient's existing conditions through the Nurses Note. This function allows the user to insert a list of current medications, known allergies and any pre-existing or history of illness the patient may have. The note can then be inserted into the appropriate sections of the doctor's report at the touch of a button, thus ensuring there are no interactions of medications and no previous condition are overlooked when assessing the patient.
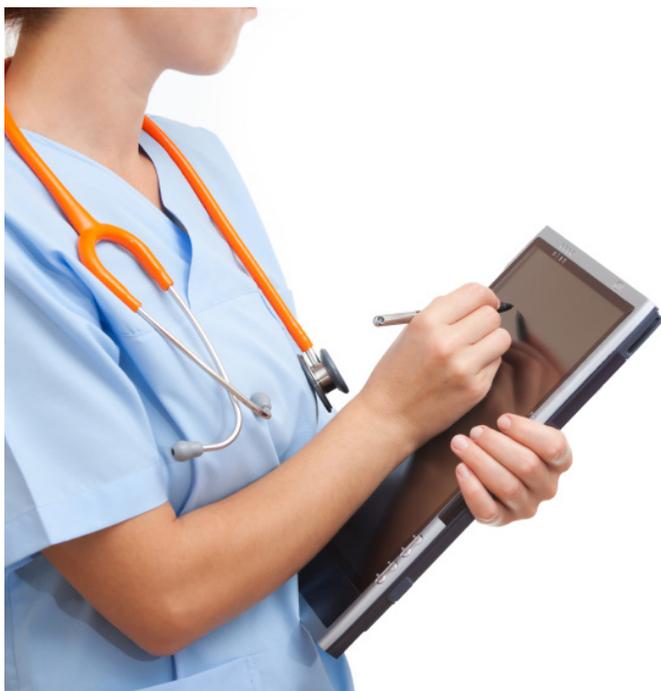

PROBLEM LIST. The nurse can monitor the patient's progress through an electronic problem list which provides a concise view of the patient's issues. This list vastly improves patient care in settings where there is shift work and information must be passed on from one caregiver to another by providing a snapshot of all the problems, treatment and solutions which occurred during the patient's stay.

REUSABLE SEGMENTS. Specific sections of the report (i.e. Allergies, Findings or Current Medications) can be re-used for future documents, which can save the user valuable time by eliminating the re-input of the same information multiple times, helping to reduce errors in documentation.

KEY FEATURES

> Voice Recognition

> Handwriting Recognition

> Fingertip Access to Patient History

> Choice of Input Method

> Touch-Enabled Forms

> Charting on Anatomical Images

> Instant Report Creation

> Patient Summary

> Reusable Segments

> Automated Formatting

CHARTING ON IMAGES. This feature allows the nurse to make notes or mark sections of importance on a pre-defined anatomical image to highlight specific areas of concern for the consultant, ensuring the chart is complete with visual cues.
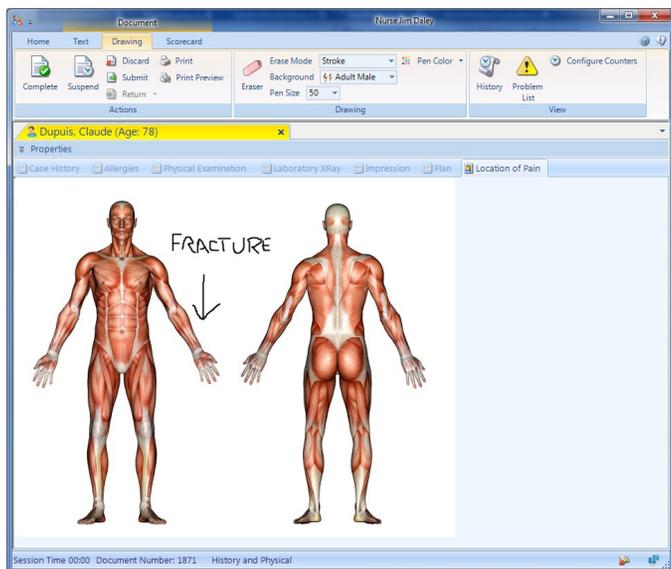

Crescendo Systems has been providing the medical industry with innovative documentation solutions since 1990. With 4 offices worldwide and a distribution network that spans the globe, Crescendo is proud to add the latest in clinical documentation to its vast product line. Centro joins **Med**Rite-*XL* and **Digi**Scribe-*XL* to outfit medical facilities with an all in one workstation for a new breed of healthcare providers.

HANDWRITING & SPEECH RECOGNITION. Centro supports the use of handwriting on tablet/slate PC's allowing the user the option to write as they would be accustomed using a digital pen. An engine recognizes the input and transforms it into electronic data, ensuring a seamless transition to electronic documentation. Speech recognition allows the nurse to quickly input patient information by converting voice to text with up to 99% accuracy.

SECURITY. As with all Crescendo products, security is priority one. Centro offers its own password security, access control, user rights and full audit trails.
